is dedicated
to Juniper
and people
choosing to
understand
harmony**

Introduction to Isms

The author is the author.
The inspiration comes from all humans
And from observing nature.
Binary Baba Om
Is just a name for the book.

Time accumulates data
But sometimes data clutters.
New piles form.
Many piles fill space.
With time
Organization is needed.

New theories come from accumulated data
Flash insight is the leap.
First in the individual,
Then if perceived to be of value,
The idea transfers
To the species.

A scientific theory
Requires peer review.
But if there are no peers
Paying any attention,
A different approach
May be tried.

These are the ponderings of
Binary Baba Om...

Ism # 1 10 kinds

Binary Baba OM says

There are only 10
kinds of people:
those who are
One with all
& those who
are naught.

Note: This was the first Binary Baba Om Poem. It was a mix of two jokes that I have liked. First was the Zen master that went to a hot dog stand to find directions to the monastery. The hotdog salesman said; “Let me guess... you seek *one with everything*.” Second was the tee shirt that said something like; there are only 10 kinds of people—those that understand binary & those who do not. This melding of these two jokes into a new one does not set the pattern that follows through the rest of the Binary Baba Om isms.

The riddle is: why does $10 = 2$? In binary 10, the 1 is in the 2's place & the 0 in the 1's place: $(1 \times 2) + (0 \times 1) = 2$. So to translate 10 binary to base-ten results in $10 = 2$... resulting in just two kinds of people—not ten. I further the joke layers by making all people “one” or “naught”. Naught sounds like not and means nothing—zero. Harmonic binary moment = {0,1}

When I made this first Binary Baba Om pattern for a tee-shirt to go on the Omkarscience website, Shivakumar, the Indian man in Omkareshwar helping me set-up the website, really liked the theme and I became inspired doing more.

Ism # 2 Two bits

BINARY BABA OM formulates

Put in your two bits
to get a new paradigm
& five clear senses

Note: This quantum of BB Om humor plays on *two bits* being a term meaning a quarter of a dollar: 25 cents. The *paradigm* word, meaning the popular perspective model of our existence, sounds like, and therefore is played as, a pair of dimes: 20 cents. And *five senses* are 5 cents. The math joke is thus $25\text{¢} = 20\text{¢} + 5\text{¢}$. Of course the binary secondary joke is in *bits*.

Ism # 3 **Be**

BINARY BABA OM calls to mind

Be or do not be.
It is not a question.

Be:

I Am.

Ism # 4 Rhythm

BINARY BABA OM notices

Rhythm is the sixth sense.
The central beat comes
from your heart's sinus node.
The mind can choose rhythms
that alter your heart's
natural fundamental pace—
misaligning the sixth sense
& misaligning your life.

Note: Thus the jokes slip into dead serious. Science, religion, and art—all re-creations—have the common denominator of the human mind regulated by heartbeat. Philosophy has the root words of *philo-sophos*, the love of wisdom. This is all the essence of Binary Baba Om ponderings.

What is our sense of rhythm & time? Only the heart knows. Yet rhythm & heart are not one of the accepted five senses: see, hear, touch, taste & smell. Rhythm is the sixth sense—paced with our beating hearts. Then the heart communicates with the brain stem, the central pattern generator, using the Epsilon brain rhythms, also called SCP for slow cortical potential, being about one wave every eight seconds

“Buried high in the right atrium, a minute knot of cells sets the heart's pace. Called the sinus node, its sparks send electrical impulses racing through the heart to other electrical cells woven throughout cardiac tissue. In perfect rhythm each successively explodes. The trail of electricity flashes so rapidly across the heart that all its cells appear to beat as one.”

The Incredible Machine: The Human Body, 1986, Nat. Geographic Books

Ism # 5 Solutionless

BINARY BABA OM shares

If you attempt to make
a solutionless problem for me,
since I choose my problems, not you,
I must refuse your imposition.
If the situation cannot be ignored,
it must be tolerated or dominated.

For me, a solutionless problem
cannot be a problem
since there is no solution.

Even a problem that requires
waiting to be solved or prepared
is not really a problem right now.

If you wish the solutionless problem to be your problem,
then you might find out
that you are really
your own problem.

Note: And the will-not-tolerate attitude pops out of the Baba here. When one tells the Baba what to think, he might choose to assimilate the idea or he might eliminate what he feels to be imposition. Our non-verbal actions and attitude already speak loudly. Words may just be too much.

Ism # 6 Experience

BINARY BABA OM advises

For individuals: experience is fast
but understanding takes time.

If society is to have a paradigm shift & suddenly realize
the modern equivalent that the world is round
& the sun does not rotate around it,
this would be a big ... big experience ...
& understanding would still take time
But in a society with 8 billion people,
Not everybody is willing to take time to understand.

Cut to the chase...

many people will claim to understand what they don't ...
& they will argue ... & fight...

Heating to a world-wide challenge.

Paradigm shifts can do that.

It is a show really ...

a really big show...

& my advice:

just enjoy the show.

Note: The Binary Baba Om vision here is of world change that comes from a Unified Field Theory. This would change perspectives, and we would discover that human unified and reduced perspectives really do run the show. Power plays, shifts in references, the whole game must play itself out, like when cutting open a golf ball packed with tightly wound rubber bands.

Ism # 7 Anti-matter

BINARY BABA OM critiques

Present day science is in error
when calculating missing anti-matter.

When a neutron, proton & electron
are together in hydrogen,
science claims the missing anti-matter is specifically
a positron & an anti-proton.

The error is that we use $\{-1, 0, +1\}$ electrical charges
to calculate. Quarks within these neutrons & protons
are known to contain lesser charges of $+1/3$ & $-1/3$.
Recalculating the 3 particles, neutron, proton & electron,
with $\pm 1/3$ charges, also calculates matter & anti-matter.

This way of balancing the equation shows symmetry
& thus no missing antimatter:

$$n + p + e^- = 6(+1/3) + 6(-1/3) = 0$$

Note: And so the Baba breaks into the math and science. This is his favorite subject. *Son and Dance Math Arranges Nature* is the book containing all *HUT* (Harmonic Unifield Theory). Quantifying $\pm 1/3$ as base units of matter & anti-matter suggests recalculating cumulative universal matter & anti-matter symmetry. Popular calculating methods lack proper reduction, grandfathered in at least since Geoffrey Burbidge & Fred Hoyle claimed in April of 1958 that, "Anti-matter may exist in our galaxy, but it cannot exceed about one part in 10,000,000 of ordinary matter if it is there." Note that Caltech physicist Murray Gell-Mann did not publish his quark idea in *Physic Letters* until six years later in 1964.

+2/3 up quark \leftrightarrow $u = 2(+1/3)$ \leftarrow To be correct, only these (up & anti-up)
-2/3 anti-up quark \leftrightarrow $\bar{u} = 2(-1/3)$ \leftarrow names need to swap positions to match
each other's components.

Ism # 8 Will Power

BINARY BABA OM proposes

For one possible discussion,
since the unification is beyond proof,
let us assume that mind & matter originate
with the universal holographic reference that we call God.

God's original Will Power to know
God's own self is what creates everything
out of the original non-existing void,
dancing harmonious order into creation.

In this unified system, initial actions define the whole future path,
as with the initial angle & initial speed as which
a ball is thrown in the absence of wind
or other external variable forces.

Science can discuss the harmonic universe
that began with a fundamental tone,
& religions refer to this first vibration
as the Word, Name, or Voice of God.

Globally, religions fail to share a common focus,
even when claiming faith in the same God.

Harmony as a chosen focus,
a field that is mathematically accessible,
found in science, art & religion,
would allow more harmony among humans
& within the environment:
the harmonic unified field.

HUF

Ism # 9 Choose

BINARY BABA OM reasons

To conscientiously do anything—
cycle repeatedly, with as much control as possible,
through these:

- 1) CHOOSE
- 2) FOCUS
- 3) EXERT
- 4) EMPTY

Ism # 10 Buzz

BINARY BABA OM observes

People chase
the buzz
when they could sit
& hum & achieve more.

Ism # 11 Limits

BINARY BABA OM pronounces

Infinity must be limited
for creation to survive.

Personal Choice is a person's savior.

There is perceived freedom of choice until the person
chooses the one mind, God, as the only true reference.

Ism # 12 Organize

BINARY BABA OM believes

The only way
to organize chaos
is by imposing harmony.

Harmony evolves from a single fundamental tone.

In the beginning was
the word in the tone,
being the fundamental circle,
& that beginning resulted in all harmony.

Ism # 13 4 mystics

BINARY BABA OM visualizes

4 mystics heard
the sound of a circle.

One named it: OM

another: Yahweh

a 3rd: Amen

& 4th: Allah

Ism # 14 clear

BINARY BABA OM alleges

To clear your mind is the goal.
It is the clutter that clears away,
& the important stuff
is neatly organized into silence.

This result is
the predominance of harmony
& a limited quality control
over chaos.

Ain't it great?!

ism # 17 Consciousness

BINARY BABA OM reflects

Consciousness is a wave
perceiving itself as a particle

ism # 18 42'd

BINARY BABA OM considers

It takes courage to feel the world.
Courage comes from the root word meaning heart.

To open the personal rhythms of your heart,
to sense the hearts of others
requires the strength of mind
of a warrior of love.

To battle the weaknesses
of your own self
& overcome pain & the adversity around you & within,
this is the path of the healer,
whether appreciated or not.

This *fortitude* is our purpose of life...
it is God's reason for creating God's self into us.

ism # 19 Ignorance

BINARY BABA OM remembers

The Conspiracy of Ignorance is a result
of the time required for humanity to evolve.

If a new idea is legitimate & important,
to be able to share this requires a very specific timing
that the author cannot always control.

Humanity acknowledging our own ignorance has always been
a necessary part of our conscious evolution.

The conspiracy of ignorance's chief mechanism
is our easy distraction.

There comes a time to focus on a better reference.

ism # 20 Do nothing

BINARY BABA OM practices

When I do not know

what to do:

I do nothing

& everything still flows towards being done.

My not choosing

is a choice...

whether I like the results or not.

ism # 21 say nothing

Binary Baba OM notices

Now
Is a good time
To say
Nothing...
“ ... ”

ism # 22 Two s's

BINARY BABA OM dreams

The once & future king
Will bring freedom to
The sword in the stone

He will remove two s's to find...

In creation's beginning & end
& all throughout the middle
& in each & every part is
the Word in the Tone.

ism # 23 Habit

BINARY BABA OM proposes

Change yourself with will power.

Stop your own bad habits.

To break a habit:

first acknowledge the action as undesirable

- 1) after you do it,
- 2) then while you do it, & eventually
- 3) before you even do it.

Continue to maintain control
over habitual reemergence.

ism # 24 Exercise

BINARY BABA OM disciplines

adapt 3 daily exercises,
sometimes each hour:

- 1) Spiritual exercise
- 2) Mental exercise
- 3) Physical exercise

This organizes disorders.

ism # 25 Drumhead

BINARY BABA OM meditates

A tightly stretched drumhead
in silence is a dynamic equilibrium.

Hit the drum & the resilient membrane goes up & down
in various harmonic patterns
until running out of that added energy.

The drumhead returns to its dynamic equilibrium
created by the circular stretching.

Second law of thermodynamics, 2LoT,
demands universal mass & energy
to increase disorder from

creation's beginning until the final equilibrium—
no longer dynamic, having used up
all of potential & kinetic energy.

When universal waves' energy
—the dance of the superstring—

is all done, particles & their anti-particles annihilate
back to nil...nada...atoms are no more.

All is stopped— absolute zero is reached.

Space & time is no more.

Do we choose to do it all over again?

There is no choice. What is... is.

There is only one. There is none...

Mmmmmmmmmmm...

ism # 26 Entangle

BINARY BABA OM imagines

Two photons entangle
like a married couple.

Upon separating,
they are still linked directly.

To cause change in one
affects the other instantly.

Not even the speed of light is that fast.

Like two people holding the two ends
of a light-weight cable that does not stretch:

Pull on one end
& the other moves instantly.

Love is like that: unifying.

Note: Quantum experimenters are confusing themselves as they impose their mass/flesh perspective of time & space, their measurements, onto the perspective of the light wave, where 1-D of space in the direction of travel, & time, are the same at each point of travel. For the entangled wavefunction, from our flesh perspective, the clock is stopped & the separating distance is zero. As far as the observer is concerned, the quantum entangled particles should not respond as if they are separate. It is always here and now—time and the direction of travel remains unchanged when there is no interaction with any other particles to change anything. Light just dances within the cosmic void where there is no time, as far as the experimenters should be concerned. The combined wave-function's possibility field continues to exist from before the two entangling particles separated, right up to observing in probability field that a spin change imposed on one is simultaneously manifested on the other. Science accepts that this "Spooky action at a distance" has precedence in nature at very small scales. Binary Baba claims that the mind is light perceiving with the flesh, therefore the minds of two people, like two photons, can become entangled also.

ism # 27 Mistakes evolve

BINARY BABA OM notices

My feeling is that, like flesh evolution,
the evolution of consciousness, which includes
science, art & religion,
is a process of making mistakes.
Using trial-&-error to find patterns
is the true scientific method.
It takes time to make errors, to discover them
& to figure out what to do about them.
Any mutation from the norm may have
valuable or detrimental aspects.
Contemplating errors allows
the one mind & many minds to adapt
by assimilating valuable aspects
& eliminating detrimental ones.
We find our way even in the dark.
... bump ...

ism # 28 Enough

BINARY BABA OM expresses

One is enough

ism # 29 Faith

BINARY BABA OM believes

If a person's faith rests in Jesus
or Buddha or Shiva or a tree,
then to be properly aligned,
the wisdom that
every part contains the whole
must be accepted as well.

There is only one mind & that is God.

One mind entered into our flesh
& we use that one mind as our own.
We impose our reduced perspectives
in order to live out our individual
& collective illusions through time.

Our mind is not mass-flesh.

our mind is energy-spirit.

Our energy-mind is using mass-flesh
as the sustainable measuring system
within which to reside—

& the One God

is the universal holographic reference
enabling every "I am" part
to holographically contain
the "I Am" whole.

ism # 30 Adrenalin

BINARY BABA OM supposes

When triggered
into the adrenalin perspective
of fight or flight,
sometimes it is best
to do the third choice:
wait observe contemplate
Do nothing

ism # 31 calories

BINARY BABA OM Shares

There are 3 ways to get calories...
& Quality matters!

Fats, carbohydrates & proteins

2 other things we need to consume:

Vitamins & minerals

ism # 32 Peace

BINARY BABA OM thinks

Different energy waves can occupy
the same space at the same time,
like waves crossing over each other on water.
Separate mass particles cannot do this as they require
their own exclusive times & spaces.

A dance is two or more
mass particles occupying
the same space
at different times,
while at the same times
occupying different spaces.
The duo moves in unison, separately.

Note: Particles of known matter are grouped under the two headings of *fermions* and *bosons*. Fermions, including leptons (electrons and neutrinos) and quarks (making up protons and neutrons), are subject to Pauli's exclusion principle, meaning these particles cannot occupy the same space at the same time. Contrarily, bosons transfer the four universal forces and include gluons (strong nuclear force), photons (electromagnetism), gravitons (gravity), and intermediate vector bosons (weak nuclear force). Bosons interacting with other bosons are not subject to Pauli's exclusion principle as they can pass right through one another, thus behaving more like waves with momentum than like particles with position. Imagine ocean waves passing through each other while the water itself cannot.

ism # 33 Reduced

BINARY BABA OM witnesses

Sitting in blissful silence on a cliff with a peaceful elder,
you watch the sunset.

Glow, reflections, colors & feelings are so wonderful
that you say, "Nice sunset."

The elder stands & silently leaves.

The peaceful elder had been sitting
in complete mental union
with the material universe,
a unified perspective

that reduced upon being measured, when you said,
"Nice sunset."

So you ended his meditation.

Like when flying & you say,
"Look Mom, I'm flying..."

When you measure; you reduce—
& since you can only fly
in unified mind—
you fall.

Try again if you choose
to learn from your errors:

In unified perspective
there can be only one.

ism # 34 Predominance

BINARY BABA OM ponders

The grand finale of entropy
is the state of equilibrium.

There is no predominance in equilibrium,
like a calm pond.

A system requires predominance
of a single point,
seen also as a fundamental wavefunction
through which the frequency & wavelength
of all other waves vary.

This is harmony.

the single-point induced wave
creates the fundamental universal field
from the perfect order of the beginning.

This universal fundamental tone
then degenerates into harmonics—
witnessed as time's entropy bringing on disorder.

Limiting the infinity of harmony
is required to sustain creation,
in order to not have all harmony
dissipated too rapidly.

Nature does this by regularly re-focusing
on the fundamental tone's predominance.

Chaos leads to equilibrium.

Order requires predominance.

Life is a balance of order & chaos,
between predominance to equilibrium.

ism # 35 Full times

BINARY BABA OM weighs

The more full times you have,
the more empty times you'll need...
From emptiness you can reevaluate... process...
organize... & re-create.

ism # 36 Future self

BINARY BABA OM proposes

Have empathy for your future self. But not too much.

Your present desire might lead you
to seek immediate gratification
that can lead to a time period
of unrewarding suffering.

Delaying of immediate gratification requires patience.

The integrity required to be patient
can be most rewarding
& bring a greater gratification
to your future self.

Have empathy for your future self.
Suffering now for the right reason
might be the best choice.

Note: The root word of patience means to suffer.

ism # 37 Ghosties

BINARY BABA OM advises

Oh yes, ghosties are for real.
They are not bad, they just have too much information
& emotional inertia

& are stuck in the material plane.

Ghosties seek balance
to be able to join in the one mind.
Ghosties can still accentuate imbalances
in living humans.

Humans without enough integrity
can invite one of these into their own life
& be influenced.

The ghosties have no guarantee that
they will leave the gravity plane to join the unity.

If ghosties imbalance humans too much
they are removed, away from re-unification.

Ghosties & humans must all seek
unity & forgiveness & love
within ourselves & others
& build & maintain our own integrity.

Hari Om.

ism # 38 Need-to-know

BINARY BABA OM observes

God, the unified mind,
has our reduced selves on a need-to-know basis

ism # 39 Start-stop

BINARY BABA OM combines

Once you start
You can't stop
Until you
start to stop

Note: First half chanted by a group of high school friends in the early 70's.

ism # 40 All good

BINARY BABA OM critiques

"It's all good" is a unified perspective.
To impose this on a person existing
in a painfully reduced perspective
might not be a good thing
from the reduced perspective.

ism # 41 Gravity

BINARY BABA OM expresses

Gravity, like light,
does not seem to have positive-negative parity dualities.
But gravity does respect differential
dominant & sub-dominant factors, witnessed as cohesion.

Imagine...

fill five balloons to the same size with:

1) air 2) helium 3) water 4) oil & 5) sand.

Stand on a diving board over a swimming pool. Drop them.

Witness that gravity does not treat all objects the same—

Gravity aligns elements in differential layers.

The helium balloon goes up & away.

The air balloon drops to float on the water's surface.

The sand balloon sinks to the bottom of the pool.

The oil balloon sinks to align with the water surface.

The water balloon drops down & moves more freely

below the surface than the oil balloon,

but not as pegged to the bottom as the sand balloon.

This cohesive ordering, like with light,

is gravity's rainbow—

& is predictable.

ism # 42 Drugs

BINARY BABA OM's
Personal preference on "drugs"
At times of normal health

Marijuana: one
All others: zero

Note: Aspirin, cold medicine, caffeine, alcohol, nicotine, etc. count as "drugs"

ism # 43 Heaven

BINARY BABA OM reveals
Christ & Buddha & Darwin
are all in heaven together.
Since the rule to go to heaven
is that you must unify
with all that is heaven,
the real question is:
can you forgive
the characters of history
enough to accept them
if God accepts them?
Can we do this now?
Can we forgive people living today?

ism # 44 Camera

BINARY BABA OM imagines...

The camera clicks—the light image is stored.
At the same moment & scene,
your closed eyes open & close quickly.
Your mind holographically records the light.
Your neural synapses flash information combining
with the universal reference,
allowing hologramic reconstruction
& you can report details of what you saw.
The same image stored on the film in the camera
carries its information to the photo paper.
The chemical bath brings out the picture.
Now you look at the photo
of the same scene you had seen.
The universal reference allows your mind
to remember & understand
the situation & time involved,
including details about the photographer
& even your emotions at the time.
A mind works because
the universal holographic reference-light allows
sensory input to be analyzed & synthesized.
That reference light is the one God
& is called by many names: OM Jah Amen Allah Yahweh...

ism # 45 Circle dances

BINARY BABA OM formulates

Before the beginning is the Void {0}.

From the void dances

the paired virtual particle & anti-particle.

As these circle dances increase in complexity,
the vibration emanates a fundamental tone {1},
a sort of universal hum— not quite yet a sound,

but with all the perfect qualities

of a sound of a circle:

Hummmm...

The void {0} with the hum dance {1},

being Om Jah Amen Allah YHWH,

produces overtones: {2, 3, 4...}

—allowing this harmonic universe.

Note: “The Way begot one, and the one, two; then the two begot three.
And three, all else...” Tao Te Ching # 42.

ism # 46 Humbly

BINARY BABA OM Reasons

If I say that I am speaking humbly,
that is a presumptuous self-judgment.

Better to just speak humbly.

ism # 47 Hypnotism

BINARY BABA OM reflects

Hypnotism happens when one helper guides another person into a relaxed Alpha brainwave set, {8,9,10,11,12} Hz.

Alpha acts as a bridge between the person's higher frequency brainwaves, greater than 12 cycles per second, & Theta, {4,5,6,7} Hz., where memories hide.

The hypnotist's controlled voice guides the merging, reaching into the person's lost memories so that they can be confronted by the higher frequency aspects of the more differentiating mind.

Attention deficit children, escaping from information overload, predominate too much in theta not allowing them to be good students.

So they are overactive in their ineffective effort to self-stimulate their own mind into higher frequencies.

Doctors prescribe stimulant medication to boost the slow brain waves into higher frequencies, enabling the kids to relax.

But with proper physical exercise, mind stimulation, rest & nutrition, the stimulant drugs can be avoided.

To provide such a stimulating lifestyle in a dysfunctional world is too often beyond the vision & intent of the parents.

Try again...

ism # 48 One Mind

BINARY BABA OM remembers

There is only one I Am.
This unified mind
is within all of the reduced minds.
One I Am peeks out
through many eyes.
Each individual claims
its own self to be a unique I am.
The unified "I Am" mind is the source
of the many reduced "I am" minds.
Both unified & reduced minds
merge into us.
Say it together: "I AM".

ism # 49 Funny

BINARY BABA OM giggles

Approaching unified perspective
it all may seem ridiculously funny.
In reduced perspective we sometimes forget
the humor of the bigger perspective.
In the bigger perspective, we sometimes forget
the lack of humor in the reduced perspective.
At times, silence really is golden.

ism # 50 Potential

BINARY BABA OM pronounces

Humans build up potential energy,
body & mind releasing it as kinetic energy.
To serve properly, the release needs to be controlled,
like with song, dance, meditation, studying
& other harmonious choices.
Even an explosive emotional release can be controlled
enough in time & place, direction & speed,
intensity & explanation.
Who is the judge?
Everybody together now: I Am

ism # 51 Tough

BINARY BABA OM alleges

Achieving the first one
is not the toughest step.
Leaving zero is what is tough.

Note: One person may say that harmony is just the way it is and that no God is needed. Another may say that to break the inertia from initial void into a coherent beginning of the highest order, as the second law of thermodynamics requires, takes *will power*, attributed to a word most battled over: God. Science can say that the order is dictated by Brouwer's single point system, better known as harmonics. But where does such high order come from? Leaving the inertial state of zero into the harmonious dance—this is tough—unless you are God manifesting the first spark of will power.

ism # 52 Truth

BINARY BABA OM considers

If someone tells the truth & others don't believe,
there is imbalance.

If unbelievers belittle any true beliefs of other people,
imbalance within the unbelievers increases.

This brings out the true beliefs even more.

If the truth is difficult to understand
& against ingrained prejudices,
this will likely create
more unbelievers than believers.

When the Messiah comes,
he is the second coming,
being also Shiva & the future Buddha
all in one body to satisfy
the world's prophecies.

This teacher of God will tell that
Om, Amen, Allah & Yahweh are all the same God
& fully within everyone.

The flood of unbelievers
against this truthful person,
will change the world.

This message will be ignored & rejected,
then revived & rejected some more until finally
the Messiah's message gets proper peer review.

ism # 53 Life Order

BINARY BABA OM searches deeply

According to the 2nd law of thermodynamics,
popularly called 2Lot, the universe devolves
from being most ordered to being more disordered.

This is called entropy.

In quasi-isolated pockets that drag behind
the universal entropy average,
life, evolution & the creations of the living,
like a carrot, an eagle's nest, or a tea cup,
can grow in harmony.

To be able to increase overall disorder through time,
the whole universe necessarily started highly ordered
with the dance of the superstring.

This path from order to disorder,
like life, is also harmonics.

The fundamental tone, being the Word,
is the new beginning in all systems
& entropy dominates from there on,
degenerating into harmonic overtones.

Life overcomes chaos by being in an appropriate mix
of environmental conditions

& by reintroducing the fundamental tone
into itself on a regular basis.

Like by eating a daily taco or chapatti.

Supernovas explode to give us ingredients.

The true miracle is the high order
at creation's beginning.

The universe began with the fundamental tone,
being the same as the dance of the superstring.

Now is dinnertime.

ism # 54 Bi-polar

BINARY BABA OM sees that

In a manic experience,
the individual is driven to outwardly share.

In a depressed experience,
the individual is driven to inward reflection.

Bipolar individuals experience becoming imbalanced
in managing this duality.

The person's material focuses can confuse energy-mind
& mass-body perspectives.

Such confusion can tilt & disrupt
the whole system's integrity.

Integrity is the goal.

ism # 55 Meditate

BINARY BABA OM calls to mind

Meditate in levels. Possible sequence to rebuild integrity:

- 1) Exercise* with unified mind
- 2) sit & contemplate
- 3) sit & empty
- 4) Sit & Om (Amen Allah YHWH...)
- 5) Exercise* with unified mind
- 6) Read or seek inspiring data

*Maybe: dance, stretching, swimming, walking, etc.

ism # 56 Whole in part

BINARY BABA OM ponderificates

When a person enters
into the perspective
of this new & old paradigm,
since every part contains the whole,
one possible notion they can attain is called
the messiah complex.

This can be a healthy experience
if that person realizes
the messiah message is
that every part contains the whole
& the whole is God
& God's name is I Am
& that same I Am is in every person.

There is only One Mind that made our perspective
of many by putting
the whole in every part.

Jah Amen Allah YHWH

Hari OM

I Am

If a messianic complexite believes in the monopolizing
of being god, this will show that person
did not get the memo:

EVERY PART CONTAINS THE WHOLE.

ism # 57 Mind duality

BINARY BABA OM observes

The basic equation for mind duality is:

$$E = Mc^2$$

As energy, the mind perceives no time.

As mass, the mind perceives time.

Our hologramic mind is the merge
of the basic $E = Mc^2$ duality,
the merge of the timeless
& time-full perspectives.

One Mind... OM... One Many.

Unified & reduced.

E pluribus Unum*.

Note: *Latin from the top of the USA capitol dome and from the USA dollar bill.

ism # 58 Mirror

BINARY BABA OM suggests

Everybody is a mirror of you.

I am your mirror. You are mine.

We must carefully choose
which mirrors we approach.

ism # 59 Only God

BINARY BABA OM watches

Muslims say
there is no god other than
the one God.

Muslim Qur'an says that
God needs no partner.

But to become a Muslim,
the prayer to God alone is not enough. Even though God
needs no partner, initiates may not become a Muslim
unless they include Muhammad
in that prayer as well.

That confusion in the initiation
makes self-incriminating initiates.

God needs no partner.

God is the only one to pray to,
though we still serve & love humans & God.

Since Islam demands that their prayer to God always
includes the human messenger's name, that is slander
against God's integrity name:

Om Amen Allah Yahweh.

God has no partners.

Note: Qur'an 5:72 says: "Whoever associates partners in worship with God, then God has forbidden Paradise for him, and his home is the Fire (Hell)."

ism # 60 chosen

BINARY BABA OM reminds

My problems are carefully chosen.
Please don't attempt to take
my problem away from me
unless I ask you to help to do so.
My problem is my real teacher, not you.
You are not my problem: I am.
I am not your problem: You are.
We just present a challenge for each other to face ourselves.
I am your mirror & you are mine.
If I do not appreciate how I reflect off you,
I may choose to not look
in your direction.

ism # 61 To do

BINARY BABA OM believes

about serving the One:

In order to do
what I must do
first I must know
that I do not know
what I must do.

ism # 62 Omega Omelet

BINARY BABA OM Poem

Fathom some omniscient gnome's
tom-tom booming metronome phenomena
from automatic tomorrows. Awesome!
Custom slalom promenade symptom dominos randomly
from *blossoming wisdom syndrome*.
Biome locomotive conglomerates
comb common denominators:
homecoming chromosome compromise
from mom home woman womb
bosom omphalos.
Domestic diplomacy;
homosapien community dome...
Commandment's bottom;
shalom kingdom come...
Nomad momentum. Omen omission.
Complete tome. Ombudsman bomb.
Atomic Freedom: at OM I see freed OM!
Omega omelet.

Note: *Atomic freedom* is the carton of eggs we break in order to start making the om-egg-a-omelet: at-om-I-see-freed-om. Don't be scrambled by this. Don't let your brain be fried or poached. Why? Too extreme... two eggs dream... Good eggs ample. Be Om-full.

ism # 63 Two pi

BINARY BABA OM sees that

OMKAR is a Hindu word & refers to Om,
the fundamental tone of the universe.

Some original doctrine of Om
was written about in the Upanishads.

Amen is the New Testament word referring to the word
in the tone, found in John 1:1 & Revelations pi.

Let pi = 3:14.

Yahweh is a word with vowels added from the translation
of God's name found in Exodus pi.

Two pi makes a full circle.

All of God's names are
the sound of a circle.

Allah is God's name from the Koran.

Jah is God's name from
King David's Bible Psalms 68:4,
being the name adopted
by the Rastafarian religion.

The fundamental tone in science
is the beginning of all harmony:
OM JAH AMEN ALLAH YAHWEH.

ism # 64 Quote

began with BINARY BABA OM
sometimes paraphrases words
that others said before, like

“God made time
so everything
won’t happen all at once”

Original quote may have begun without “God” from Ray Cummings in 1919. God may have entered in a 1984 Waterloo, Iowa column, maybe popularized by John Archibald Wheeler in 1989 who claimed he saw it as graffiti in Texas..

ism # 65 Om Many

BINARY BABA OM shares

ॐ = Om

Om manifests:

One Many = E Pluribus Unum =
Fundamental Tone + Overtones = Harmony

One word & name & voice of God
with many spellings:

Om Amen Allah Yahweh

ism # 66 Choice savior

BINARY BABA OM believes

Choice is the truest savior.
Since the infinity of harmonics requires limitations,
there is freedom of choice
until we choose God as the reference.
But even with harmony being limited,
like a good alphabet,
we can create a whole universe that includes
love & adventure & song & poetry.
Freedom of choice, even at the quantum level,
is one eye's reduced perspective,
while complete destiny is the other eye's unified point of view.
We need both eyes to see well.
A coin has two sides. Spinning the coin,
its duality merges into a unifying verb.
The coin stopping can be observed
like emerging scientific discovery
waiting its appropriate time to reveal.
Even though data was long gathering up to the moment
of revelation, when discovery occurs, it might be very fast;
first for one individual, then for the public.
Still, understanding that fast experience requires time.
Our true job sounds simple:
choose the correct universal reference.
This could become a challenging task
for humanity as a whole.
Only time will truly tell our story.

ism # 67 Destiny evolves

BINARY BABA OM Weighs

Someone may deny that his or her destiny exists
& claim that his or her choices decide the future.

That is a choice one is free to believe.

Since there is only One Mind
guiding many bodies, brains & egos,
where might the ego admit
that the choices originate?

Yes, choice is the savior
for each individual...

until that person evolves enough
to admit there is only One Mind.
Choice exists for our reduced selves
even while we acknowledge
that The One Mind is God:

OM JAH AMEN ALLAH YAHWEH

ism # 68 Philosophies

BINARY BABA OM rolls his thoughts

My philosophies are my goals.
To accomplish my goals, I must:
choose, focus, exert & empty.
It is sometimes difficult
to walk the philosophical talk.

ism # 69 Illusion

BINARY BABA OM pronounces

I am a verb, you are a verb, God is a verb.
All is a verb.
To think of any of this as a noun is the illusion.
Yet; I You God & All are nouns.
To live within the illusion
is our choice.
Falling & impact
is illusion for the light-verb mind
but is reality for the flesh-noun mind.

ism # 70 Loved & Safe

BINARY BABA OM expresses

While raising children, the goal is to give them
the feeling of being safe & loved.

We all begin as children & this need never changes.

A paradigm shift, changing what we believe,
changes our sense of security
& can allow us to resist the change.

If we cling to an outdated reference,
the central theme of our beliefs,
a proverbial Santa Clause,

then resistance to change causes heat
& possibly many more problems
than the actual change itself.

A societal paradigm shift
is when humanity faces
this change of a reference together.

Santa has left town.

Sleigh bells are quiet.

Now we are preparing for our paradigm to shift
from individuals & groups feeling separate,
to realizing that every part contains the whole.

That means that God looks out
of every eye, connecting us all.

ism # 71 $t \neq id$

BINARY BABA OM figures

Minkowski, Lorentz & Einstein erred.

Wanting to make time “t”
the same label as the 3 dimensions
of space, being distance “d”
of height, width & depth, they made $t = tic$.

First, they multiplied time “t” by “i”,
the imaginary number, $i = \sqrt{-1}$.

Then they multiplied by “c”, the speed of light.

Speed, like miles per hour, equals distance over time:

$c = d/t$. Let's check their work.

In “tic”, replace c with d/t: tid/t

Since: $t/t = 1$, cross out the “t”s to find
the error that time now equals imaginary distance: $t = id$.
even though t is not represented in id.

They claimed time t has a distance d measurement.

They made t the 4th dimension by making time not time.

A true equation shows the error in general relativity:

$t \neq id$. This is the equation for a t-shirt.

Time does not equal imaginary distance.

Stick that in your chillum & smoke it.

ism # 72 waves

BINARY BABA OM visualizes

One wave meets another wave as a wave.

A particle meets another particle

& they both react as particles.

A light wave can meet a particle & become a particle.

Our minds are energy waves

looking out of mass particles,

so senses & imagination can perceive both:

the moon as a particle with position

or as a lunar wave with momentum.

A skier has position in each moment,

while the ski tracks show momentum through time.

Two skiers, like two fermions,

cannot occupy the same space at the same time,

but their ski tracks can, like two interacting bosons.

Put that on your banana pancake & eat it.

Note: Particles of known matter are grouped under the two headings of *fermions* and *bosons*. Fermions, including leptons (electrons and neutrinos) and quarks (making up protons and neutrons), cause spacetime *to contract*, manifesting the force we call gravity. Fermions are subject to Pauli's exclusion principle, meaning these particles cannot occupy the same space at the same time. Contrarily, bosons transfer the four universal forces and include gluons (strong nuclear force), photons (electromagnetism), gravitons (gravity), and intermediate vector bosons (weak nuclear force). Bosons interacting with other bosons are not subject to Pauli's exclusion principle as they can pass right through one another, thus behaving like waves rather than particles. Bosonic wave fronts *expand* outward from their fermion sources, creating more space, while the fermion sources *contract* space towards that center.

ism # 73 Demands

BINARY BABA OM supposes

Life demands that everybody must have a problem.
Wise people choose their problem carefully,
claim it as their own,
& take charge of the challenge.

ism # 74 membrane

BINARY BABA OM reflects

The outer layer of the cerebral cortex
is where the memories are stored.

This two-dimensional membrane
provides the brain's holographic plate.

The universal reference, being God,
is constantly available & harmonically related
to mind's stored information.

The iris is the curved plane of the eye
where the incoming image is displayed.

This two-dimensional membrane
provides the optical holographic plate.

ism # 75 Stay inside

BINARY BABA OM suggests

Stay inside

When clarity to perform a task is demanded,
instead of thinking of observers:

Stay inside

When you are 2 & you should be 1,
when you are there
while you should be here,
don't be outside of your self:

Stay inside

ism # 76 Saturation

BINARY BABA OM
repeats others then adds

The solution
to pollution
is dilution

until saturation

ism # 77 Tell me

BINARY BABA OM requests

Believe in me enough
to tell me the truth
or to remain silent.

ism # 78 beyond time

BINARY BABA OM reasons

From original void, God the original will-power created.
God the one mind became light & then created humans
so that the light energy could look out from mass flesh
& see creation from down inside that reduced perspective.

Our bodies are mass & our minds are light
so we get the duality of perspective;
mass is within time while energy is beyond time.

This way we can anticipate
position & momentum through time
& hit a moving ball in the physical now.

We remember the past
& examine possibility & probability
to anticipate the future.

But we only have NOW.

The rest is math.

ism # 79 Hologramic

BINARY BABA OM ponders

Fundamental frequency information,
being an inverse ratio of $1/2$ wavelength,
having originated from a single reference light,
is stored on a holographic plate. To reconstruct
the hologram from this plate, the same reference light
needs to shine on the plate. This requires just the right phase
adjustments, being relationships between the troughs & crests
of the reference light & the stored waves on the plate.

Also, amplitude, being the brightness of the reference light,
must be correct to not be too dominant or too sub-dominant.
The human brain, like a holographic plate, houses the mind,
whose images are like the reconstructed hologram. For our
minds to work, we need to be in proper phase with the
universal reference light. We must allow the proper intensity
of the reference light to saturate us or we imbalance our
hologramic mind. Too much reference light
& our diversified thoughts get flooded.

Too little reference light & we can't
see the big picture.

The reference light for the human mind is God.
Our key to evolution is finding phase & amplitude balance
In our belief structure of God-as-mind-light
experiencing the fundamental tone
of our bodies in the material world.

To acknowledge the fundamental tone properly as $\frac{1}{2}$ wavelength (one half lambda: $\lambda/2$) it works better to allow a new symbol om, ॐ , to equal $\lambda/2$: $\text{ॐ} = \lambda/2$

ism # 80 signal & noise

BINARY BABA OM reminds

Everything has a signal-to-noise ratio
defined by Harmony.

From the fundamental tone,
being the primary signal,
being the word & name of God,
comes all harmony—

overtones dancing with each other.

Chaos results from
continuing harmonic degeneracy—
signal deteriorates into noise.

Overtones increase in number
towards infinity, increasing as noise,
crowding in on themselves with complexity,
obscuring the signal of the solo fundamental tone.

Note: Signal to noise ratio can be understood by thinking of tuning a radio: the broadcasted signal is clarified by tuning out the static, the noise. Harmony as a global focus would allow assimilation of many beliefs while necessitating the elimination of others. Society's paradigm shift comes when, through understanding and belief in harmony, differences in pronunciation and spelling of the Name and Word of God can no longer support accusations of infidelity. Since God unification cannot be proven without getting outside of that unification, an impossibility, "God" is a decision made within personal faith. Even an atheist, agnostic, or the most skeptical observer should find no fault with harmony as a common focus.

ism # 81 Energy Mind

BINARY BABA OM propounds

We are one energy mind
perceiving out of many flesh masses.

Mass & energy relate
through a constant single point.

The single point is the center-void of all circles,
relating the same to every point on any circle.
The sound of a circle is the word manifesting all harmony
& a refined heartbeat: Om Amen Allah Yahweh.

ism # 82 Word one

BINARY BABA OM's
Once & future Dream

word in the one
word in the tone
sword in the one
word in the stone
sword in the tone
sword in the stone

ism # 83 Blossoming

BINARY BABA OM drives home the idea

We are coming up against
a new evolution of consciousness:
the blossoming wisdom syndrome.

The revelation is that every part contains the whole.

But to balance within the whole
requires a tonal reference.

Tonal means within the material world.

This is the Word & Name of God:

Om Amen Allah Yahweh.

This evolution is the reestablishment
of the fundamental tone within humanity in order to
reorganize that which increasingly falls apart.

This means that just knowing that
every part contains the whole

is only one of two parts to the effective evolution.
The second requires making the fundamental tone
to be our reference.

Through time, society will disagree over
who is the one messiah,
who is the one anti-messiah,
& who are the many lesser false messiahs.
The truth is in the messenger's message:
every part contains the whole.

Hari om

ism # 84 Prime

BINARY BABA OM formulates

Prime numbers are all natural numbers except 1
that can only be evenly divided
by 1 & themselves.

In 500 B.C. Euclid proved
prime numbers to be infinite.
The world still seeks the pattern
of prime numbers into infinity.

Here is a simple way
& children can do this...

Non-prime numbers are composites, being all
the natural numbers that have more whole number factors
than just 1 & themselves.

The numbers inside
of a multiplication table represent
all of the non-primes into infinity.

Infinite primes are found in a number line
by removing all the numbers that are found inside
the field of a multiplication table.

Note: The infinite set of primes is defined in an equation derived from this sequence.

ism # 85 Temple

BINARY BABA OM reminds

In a holographic universe,
the whole is in every part.

The whole is God.

One's body is the temple of God.

Your home is the temple of your body.

Earth is the one home for our fleshly temples.

Thank God for God.

ism # 86 Reflection

BINARY BABA OM notices

Looking at a person place or thing
we must consider them a reflection of ourselves.

If we don't like that mirror,

we can choose to try to avoid or tolerate it.

If we really like the mirror, we want more of it.

Deep love comes from seeing
the other person place or thing
as a mirror that completes us.

ism # 87 Cosmic chord

BINARY BABA OM understands

We each judge our self to be just that—
our individually named self.
The mind is light perceiving.
The heart is beating the rhythm
of now's physical presence
resonating through the body's mass.
To become the unified whole while perceiving
simultaneously through an energy mind
& a mass heart,
we need to maintain synchronization
of the heart's rhythm
to align with the drumbeat of life—
to dance the cosmic chord
& harmonize with the reference light
of the whole universe, being God.
Harmonic rhythm of the unified field
is the dancing equality across the double lines
between energy & mass:
$$E = Mc^2.$$

We dance until
our heart is content to stop.
Hari Om

ism # 88 Benefit

BINARY BABA OM balances

I believe my science is for everybody.
This bothers some people because they deny
my right & obligation to be so unique.
I believe if my science is true then people
can make these ideas their own & benefit.
The gainsayers, those who say against,
say I am trying to lead others astray
as I have led myself astray.
The gentle hooray-sayers appreciate my perspective
of life, seeing it fit reality with balance.
Those who say hooray too much
are missing the quiet center-point.
Hari OM to them all.

ism # 89 Holy Man

BINARY BABA OM tells a story

Once lived a holy man who loved humans.

After his flesh had died, his soul moved on.

Then lived a king & he died & his soul was confused.

Another soul divided into two bodies born the same day.

One lived as a biologist & and the other became a president.

Upon their deaths, the soul-energy aspect from the biologist moved on, while the president's soul got stuck as a ghost & did not move on. Then a physicist lived & died & a year later a baby was born. With his first breath on his own, the pattern was imprinted onto the baby's mind—including the lives of the holy man, the king, the biologist & president, & the physicist.

This one baby lived his life working out the unfinished businesses of his four past souls. Successful, that tetrahedron of past lives became the crystalline structured light seed to gather all the integrated souls from Earth to be removed. After, people continue to live each day not even knowing their collective consciousness has provided a harvest.

Since time is no longer perceived by this harvested unified light soul; the end is same as the beginning.

Living in flesh perspective sees our harvest seed
also begins creation to begin with;
the alpha & the omega.

Hari OM

ism # 90 over & over

BINARY BABA OM humors

About time circles:

History copies itself, fractally speaking.

Coinciding coincidences synchronize simultaneous
contemporary times together,
thus repeating reproduction
over & over, around & around
so redundantly that it keeps
on doing it again & again.

Let me reiterate...

Once again...

Deja Vu

ism # 91 miracles

BINARY BABA OM meditates

I cannot choose to perform miracles
simply because my ego wills.
All I can do is wait & prepare
because timing is everything.
Situations arise.

ism # 92 Two events

BINARY BABA OM watches

One may say that when two events align
is not synchronicity, it is only coincidence.

Or one may say it is not coincidence
but that it is synchronicity.

Yet both words have roots
that mean timing together,

like simultaneous & contemporary.

Two events that happen at the same time
demonstrate a phase relationship pattern
which is the essence of harmony, good or bad.

Whether one believes in God or not:
everything is in harmony.

ism # 93 Forget not

BINARY BABA OM reminds

Don't Forget

The joke: we do not remember what we forgot.

ism # 94 Will to know

BINARY BABA OM explains

God as void generated a spark
of the will to know self: I am.

God's circle-dance mind willed to know more,
becoming timeless energy & time-dependent mass.

The One timeless Mind imagined many minds
& entered into flesh.

Only one I Am looks out of the eyes
of all the individual bodies.

Each one of the many body-minds
believes in its own separated I am,
each with ticking clocks.

There is only one timeless I am.

Our individual I AM is a spinning disc
appearing as a glittering sphere of light.

If you stop your spinning disc,
you see it has two sides—two perspectives:
one is timeless & one is time-full.

There is only one timeless I Am,
the source of many time-full I Ams.

ism # 97 Five years old

BINARY BABA OM contemplates

For our consciousness to work,
each of us has to be a central observer,
which I will call *I Am*.

We each said the words “I Am” at five years old,
referring to ourselves.

We still refer to ourselves the same.

That central observer *I Am* in each of us is the same
as it was at five, a constant through changing ages,
different times & different places.

Yet that observer *I Am* relates
to the experiences & believes
itself to be not just the *I Am*,
free from changing time & space,
but I am a man or I am a woman
or I am a writer or I am tired...

whatever observations

we identify with

we take on as identity,

including our names, bodies & ages.

But pure I AM does not have the same limits.

ism # 98 Be Nanas

BINARY BABA OM visualizes

Once upon a time in the garden, bananas were plentiful year round.

The people, especially the children,

loved to eat those sweet bananas... Ah... the Joy!

With time, bananas were taken for granite;

like pebbles on the beach, they were everywhere.

To make them sacred again, a banana teacher arose.

He brought new joy. He said, "Look! Put your finger in the end here

& gently push through..."

& the people, & the children especially, were full of joy.

The bananas split into three long pieces.

Every whole banana could be a trinity.

This kept joy in the bananas a short time. When the joy had left again, bananas grew scarce. The bananas wanted joy too... no happy children, no happy bananas.

So a new banana teacher with not much joy decided the people must ration their bananas: "Only two thirds each!" So every third of a banana gained new value.

With time the banana teacher & new banana teachers, dried these banana thirds to be able to store them through time. Soon people only wanted dried banana thirds. Joy, true Joy, the unity of a happy banana people, this had fled.

& with the high value of dried banana thirds came counterfeit banana thirds...

like dried slugs, dead little things & trash type nothing food.

& the people wanted more. Even the banana teachers had forgotten

the True Banana. But then one day a questing child, unable to have joy

in reaching for dried banana thirds, prompted by dreams & confused stories of the True Banana, wandered away from his people. & he found a garden with bananas growing, whole bananas, that could be split in three or eaten whole!

Yum! They were good. True Joy; happy banana & happy child. The child said,

"The bananas & the people are One. I Am the True Banana! Ah."

Who's the True Banana? Everybody together now...

one... two... three... "I Am!"

ism # 99 Changes

BINARY BABA OM conceives:

It is through
the evolution of consciousness
that we can manifest
our science, art & religion
on the material plane:
build a laboratory, paint a picture, build a school.

The mental plane is the level
at which we work out through trial & error
our own evolutionary patterns.

Big changes in evolution,
both physical & conscious,
can seem to occur rapidly,
but it is the little changes
that build into those big changes.
Like a small stream being blocked
by a big temporary dam,
for us witnesses & researchers,
many small changes may be storing up
& not revealing their changes,
but suddenly an event shows
all the stored small changes
as one big change:
the dam breaks.

ism # 100 Disharmony

BINARY BABA OM notices:

If humans *choose* disharmony,
we increase local entropy.

As entropy increases disorder,

harmonic energy can be introduced

to impose order on the entropy, demonstrated

with drumhead harmonics. Begin by *randomly* dropping
a handful of sawdust or lightweight sand on the top

of a drum. Impose harmony by creating

the drum's resonating frequency inside of the drum

so that the drumhead vibrates its fundamental tone.

Increasing the imposed frequency brings increased disorder
until the second harmonic pattern appears.

Part of the drumhead stretches upward & part stretches down.

The oscillating drumhead alternates up & down,
vibrating the sand into the quiet linear nodes.

Increasing the frequency further,
the third harmonic will appear.

Disorder occurs between each pattern, defined by
signal to noise ratio based on harmonic degeneracy.

Harmonic compression waves impact
the two-dimensional circle-shaped drumhead surface
forming the mandalas with the linear & circular quiet nodes.

Note: 2-D drumhead harmonics do not follow the string's simple 1-D frequency pattern with integer multipliers. The frequencies of more complex drumhead patterns are predicted with partial-differential equations.

ism # 101 Entropy

BINARY BABA OM explains

Physics demands equality; as into the future, also into the past. Since a solid egg is low entropy, being a high state of order, physicists tell us it is likely to increase disorder not just into the future but also towards the past. Upon breaking, the egg goes from high order to low order. Current science models say that after you break the egg, it will most likely never un-break again. That might be true, but the perspective obscures the fact that the egg had already come together from scattered ingredients. The egg had grown inside a chicken that had eaten grains which had grown when sunlight initiated photosynthesis, utilizing water, minerals in the ground & CO₂ from the air to build the plant's structure. The minerals had come from exploding stars & the CO₂ had come from decaying plants, exhaling animals & other sources. The egg had come together from ingredients that previously had been scattered all over the universe, uniting into the ordered state of a present moment, the egg, only to break apart in the next moment. The low entropy egg really does have a past & a future with higher entropy states. Same with a drinking glass that breaks. The current paradigm in science says that the glass cannot in the likelihood of the duration of creation ever put itself together. But in the past, sand was scattered on a beach, a human gathered it together, melted it & made a glass. I could drop this manuscript I am working on & the pages would be scattered to the wind, an instant change from low entropy to high. But in the past, I had put this manuscript together anyway, from paper that had been made from trees, which had grown from minerals created in the Earth & stars & from ideas from many people who came before me. Not only life grows into higher ordered states, but the life brings other things together too, like a farm to produce eggs, or a factory to make glasses. This "experience" of increasing entropy into the past seems to not be currently noted in popular physics.

ism # 102 Physics
(a contrast to ism # 101)

Binary Baba Om Taunts

The 2nd law of thermodynamics, 2Lot,
demands the universe to be constantly falling apart.

The highest order was at the beginning.

The arrow of time representing increasing disorder is
pointing from the beginning to the end.

But another aspect of physics demands that NOW,
in the mass sense, be the highest order of all time.

A cup will break apart into the future, yet physics
also demands it breaks apart into the past as well.

In this perspective, disorder's time arrows
are increasing not just into the future,
but also into the past as well,
making NOW the highest order of all time.

Life is this. Life is more than just mass with the single
arrow pointing from beginning to end.

Life's prime time is NOW.

Note: two perspectives.

The arrows point the direction of increasing disorder (increasing entropy).

Mass: beginning \longrightarrow NOW \longrightarrow end

Life: beginning \longleftarrow NOW \longrightarrow end

ism # 103 Generations

BINARY BABA Om wonders

Each & every one of us may look back at our ancestral tree in terms of the doubling of one— the harmonic binary set through time without zero: $H_{BT} = \{1, 2, 4, 8, \dots\}$. In the simplest genetic form, we are each one person with two parents, four grandparents, eight great-grand parents, & sixteen great-great-grand parents.

If I do my numbers with an estimate of thirty-three & a third years between the birth of one generation to the birth of the next, then my four grandparents, born approximately one hundred years ago, constitute the direct living ancestors of that one generation required for my existence. Two hundred years ago I require 32 direct ancestors. Three hundred years ago I would have had 256 direct ancestors. Four hundred years: 2048 ancestors. One thousand years ago I would have had 536 million ancestors. Two thousand years ago I would need 573 quadrillion ancestors (5.73×10^{17}).

How can that be? That would be almost
100 million times Earth's population today!

Population is supposed to be generally shrinking backwards in time.
That's 573 quadrillion ancestors
just for one person alive today.

Note: A) All children of the same parents, of course, have only one set of ancestors. Cousins share grandparents and earlier generations. Through history there were lots of big families and lots of marriages making lots of kids with lots of cousins marrying each other. This might be able to crunch the numbers enough backwards in time to be reasonable. B) Or... That may be too many ancestors to crunch with just big families and kissing cousins. Therefore: time is illusion. Either way, it doesn't matter. I don't care if my reality is illusion or not. I am playing the game, whatever it is. I don't jump in front of moving cars because my experience tells me in this game that cause and effect is real. I choose to play. Body-death is the end of the Earth game for each player—illusion or not.

ism # 104 I Ams

BINARY BABA OM states

I believe & am not required to prove,
that there is no god except
the one God whose name is “I AM”.
Before creation, before spacetime,
God *is* void.
Within creation,
el Verbo has become flesh
& the *I AM* silently peeks out of the eyes
of each & every person. God, the universal *I AM*, has
created us for God to experience God’s own self through
our diversity, through our individual *I Ams*.

Note: In Hinduism, Atman is this all-encompassing “I Am” Brahman that resides in each individual. Two Hindu people greeting Namaste and Namaskar are honoring to the same Atman that reside in each of them.

“El Verbo” is “The Word” in a Spanish Bible’s San Juan 1:1. The first person present verb “I Am” is God’s name in Exodus 3:14. According to Gödel’s Incompleteness Theorem, a unified system cannot be proven without getting outside of that system. A completely unified system has no other than itself, as in referring to the totality of space and time, or as with a unified field theory in physics, or with creation only by God, being the Way. That unified system cannot be properly observed to state any proofs. Using the imaginary number “ i ”, $\sqrt{-1}$, quantum mechanics can seem to get outside of reality to obtain statistical probabilities, but even that is not outside of the unified system. If the original void *is* God and exists as pure Will of consciousness, serving as the universal reference for our holographic minds, an individual’s belief is not “proof”. Our ability to prove has its limits. Gödel’s Incompleteness Theorem proves that a proof of complete unification can only be subjective, the realm of experience and faith. Within the holographic unified field, at best we can only analyze statistical probabilities. Then we synthesize our believable possibilities—right or wrong.

ism # 105 help

BINARY BABA OM wishes

Inspiration for the people who ask when they want to help,
who say thank you or show appreciation after being helped,
& will not be offended if help is not needed or available.

Motivated self-sufficiency is admirable,
as is motivated team work.

Motivation is the key.
& relaxation... Ah... breathe in...

ism # 106 Suffering

BINARY BABA OM ponders

Our friend Buddha taught that desire causes suffering.

My desire priorities: I wish my energy mind
to continue to center & live in my flesh body.

& I wish to maintain this body so that the mind can continue
functioning properly.

Thus FOSH CET:

Food shelter health communication education transportation.

Part of the shelter is that I need clothes.

Also I need water & food as I transport.

Some desires are necessary to live.

Will-to-survive is life's most basic desire

& is the force behind all of evolution.

Assuming that some desires are necessary

& that Buddha was correct about suffering,

then desires must be chosen with care

since they all make suffering inevitable.

ism # 107 Nature tunes

BINARY BABA OM questions

If nature tunes to harmonics, shouldn't human choices?
& if so, how much? All of nature uses harmonics
to organize mass & energy & falls apart
according to entropy, which is the measurement
of disorder, which is harmonic degeneration.

Though human choice is unique,
it adheres to Nature's laws.

We hope to have a large enough perspective to base our
choices on what costs & benefits each has.

Choosing disharmony increases entropy,
while choosing harmony might allow
new levels of organization.

Nature is a mixture of harmony & entropy.

Sometimes, as with an earthquake
or with strong wind blowing across a bridge,
too much harmony can become disruptive.

As with nature, human choices seem to be reaching
a state of rapidly increasing disorder,
a time when choosing to understand harmony
becomes a choice of survival.

ism # 108 still stuck

Binary Baba Om unify duality

After some people experience complete unity,
they do not take the time to properly reduce the experience
to be able to accurately understand or discuss it. These people may
then refuse to admit that they are not always in the unified mind.
Exploring unity requires reduced mind, essential for differentiation,
allowing adaptation within our natural and social environment.
If spiritual seekers experience a false-summit, it is easy to find reason to
seek no further. They may choose some pre-established vocabulary of
religion, science, or philosophy, allowing them to slip into an illusion of
completeness even though they have not yet attained
their correct balance of perspective.

To point this out to them can trigger arguing, magnifying the point that
they are still stuck in reduced perspective.

People get stuck in this wisdom-ego, uncontrollably shifting
points of view back & forth between the timeless energy mind
& the time-full flesh-mass consciousness
—between unified and reduced perspectives—
losing track of their own claim's errors.

If one claims to be in unity,
voicing the claim itself
requires being in a reduced perspective.

Wisdom is spoken from a mind harmoniously dancing between unified
& reduced perspectives.

unity experience + time to understand = possible wisdom

ism # 109 Ontogeny

BINARY BABA OM analyzes

Ontogeny recapitulates phylogeny.

This is an old saying, though mostly rejected,
which I still accept;

growth of the individual follows up the growth
of the evolving species before it.

Consciousness is one level that reproduces also,
but it is an evolution of ideas. If the species did not
preserve ideas, every child would have to reinvent
the wheel & car, & computerized remote controls, & $E = Mc^2$.

Our education exists so that the individual can learn
what the species has learned up to that time
& the students' true goal is to build upon that foundation.

Reversing and adding to this old saying makes:

Phylogeny recapitulates alpha ontogeny.

The future growth of the species must follow the growth
of the most evolved individual.

Consciousness requires proper reduction to synthesize
understanding or the new evolutionary paradigm.

Evolution requires the evolutionary seed—
the mutant with the new beneficial trait
that gets passed around.

Reproduction of a seed of conscious evolution
does not require sexual reproduction.

A story well told, a good publicized article,
or winning a competition
does wonders to reproduce a new idea.

ism # 110 Armageddon

BINARY BABA OM remembers

Armageddon
in the spirit world
is already finished.

Angels, demons, past lives,
our souls...all gone. Now it is us
flesh bodied humans & God
& also a few ghosties that are
stuck in the gravitational field.
Armageddon in the human mind
is swirls of Dreams & prophecies.

A societal paradigm shift
must still be played out
on the physical plane.
As a collective whole,
our ignorant minds
imagine the show.

Armageddon's purpose
is that we must clean up
our own misguided beliefs.

Reduced perspective inevitably bows down,
gives up the lead & lets the One Mind guide the show.
Everybody contains both unified & reduced mind.
The dance continues. Hari om.

ism # 111 theories

BINARY BABA OM modifies:

Many people claim to have
unified field theories.

I would guess that most of them, like me,
do not have proper credentials
for easily obtaining peer review for such a claim.
My attitude is that I must just state my perspective
& that has to stand on its own,
regardless of my lack of affiliations, degrees, publications
& other recognized credentials.

The proof is in the apple.
The pudding does not fall
far from the spoon.

ism # 112 Another

BINARY BABA OM recognizes

Another day; another taco.*

*Variations:

Another day, another chapatti.
Give us this day our daily bread.

ism # 113 Tones

BINARY BABA OM circumscribes

The universal sound of OM is the sound of a circle.
Om is in Hinduism & Buddhism, also spelled as Aum & Hum.

As a circle spins against an external point, or vice versa,
every point on the circle resists the same,
releasing constant energy.

Rubbing the circular rim of a crystal glass with a wet finger
until the vibrating tone emits is demonstrating harmonics:
a fundamental tone & overtones.

This circular vibration, the all-encompassing fundamental tone,
provides the source of constancy & harmony
for beginning the universe.

Religions refer to the single source
as the Word, Name, or Voice of God.

Intonation of the Word

—a monk chanting the hum of a circle—
allows alignment of an individual
with the circular fixed-point requirement
& thus with the universal reference,
being the Void, being God,
no matter which one
of God's many Names that one chooses:
Om, Jah, Amen, Allah, Yahweh or another.

ism # 114 Beliefs

BINARY BABA OM ponders

When I judge appropriate, I share my beliefs.

If people disagree, they are free to do so.

If they wish to argue, I might engage or I might not.

I will choose.

Generally I do not negotiate my beliefs.

What I believe may change

but that is business between God & me only.

Compromises in situations might be correct,

but to compromise a belief

means that it was not much of a belief to start with.

I believe in one reference for the whole universe,

for every tree, kitten & human

— whether other people choose to believe in that or not.

The reference is the void.

Void manifests circle-dance, being the word,
harmoniously & holographically unfolding creation.

This is God.

I Thank God for God,

for then I can relax my will:

OM JAH AMEN ALLAH YAHWEH

ism # 115 Bonding

BINARY BABA OM examines

In both covalent & ionic bonding,
the valence balancing of outer electron Fields
of electromagnetically neutral atoms is erroneously assumed
to be a function of electromagnetism instead of being an effect
of the strong nuclear force. The strong nuclear force configures
a harmonic dance with the limited principal quantum number,
 $2n^2$, where $n = \{1, 2, 3, 4\}$, manifesting the maximum probable
electrons in each shell:

$\{2, 8, 18, 32, 32, 18, 8, 2\}$.

An electronic configuration of the elements
shows that inert gases, except helium with two electrons,
all stabilize with only eight electrons in their outer shell.

Valence equilibrium depends on this rule-of-eights
to seal up the strong nuclear force
in the same way that eight small cubes stack into one big cube.

Science teachers are currently mistaken
to assume electromagnetism is completely responsible
for ionic & covalent bonding.

The strong nuclear force
reaches electrons beyond the nucleus,
which counters the erred assumptions.

Note: Erred assumptions in the Yang-Mills Theory and Mass Gap Hypothesis claim the strong nuclear force can act only over a distance of the nucleus itself. Reality requires the nuclear strong force to be the source of the valence force that oxygen uses to rip electrons from “flammable” material, causing fire, due to oxygen filling its outer shell with eight electrons, way beyond the nucleus of atoms—called oxidation.

ism # 116 Harmonics

BINARY BABA OM defines

The path for disorder to gain more order
is through the harmonic fundamental tone.
The degeneracy path from order to disorder
is also natural harmonics.

The highest order potential,
being the fundamental tone,
presents a new beginning in all natural systems.
from there on, entropy dominates at variable rates
—the fundamental tone degenerating into overtones—
also called harmonics, differentials, partials & upper partials,
leading through increasing chaos
towards equilibrium.

ism # 117 Love

BINARY BABA OM Feels

Loving God & loving people... these are most important.
Unconditional love for people does not require
physically being with them.

Many lonely people know it to be easier to love
& be loved unconditionally by a pet, like a dog or cat.

Since every part contains the whole,
the animal's love is also a unified aspect of God love.

ism # 118 Satisfy

BINARY BABA OM watches

Animals focus on food, sex & territory—
with changing priorities in differing circumstances.

When all is satisfied and the animal can rest,
& plays to train to be able to satisfy needs
of food, sex & territory in their future.

When humans satisfy these needs,
then rest & play are in order.

Some decide they need
more than the rest & play.

Some human's need to satisfy
another need: the drive to know.

Once satisfied in these basic needs
a person could choose that satisfaction
might just be enough. To find satisfaction
humanity could explore & agree upon
a basic standard of what is enough
provision for every human;
food, shelter, health,
communication,
education
& transportation—

Foshcet.

We could find new balance
in building Earth's new society
just by defining when enough is enough.

ism # 119 Skeptic

BINARY BABA OM rambles

Science requires healthy skepticism.

Science criticizes ignorant gullibility.

Strong faith requires experience.

Experience can happen rapidly

but understanding experience

enough to explain, must take time.

Someone claiming to be an atheist scientist
cannot use limited science to justify the atheism.

But an agnostic scientist is justified in not knowing.

A Scientist that claims all is chance cannot assimilate
enough information to rise out of a reduced perspective.

Someone who claims to be a scientist yet has faith in God
puts God as creator of science. A science that includes God
admits that, like Gödel taught us, that a completely unified
system cannot be proven. A scientist adhering to the 2nd law
of thermodynamics can admit the beginning was the moment
of the universe's highest order—a situation which, without
God, is completely improbable to the highest degree.

ism # 120 Empty power

BINARY BABA OM suggests

Vacation dynamics is the power of emptiness

Note: The universe began with a vacuum, the original void, the zero cosmological constant—emptiness. Virtual particles and anti-particles danced into existence and the dynamic dance was highly ordered to be able to create and sustain creation. *Vacuity* is the root word of vacation and vacuum. *Dynamos* is power. The power of vacation is supposed to empty the stress.

ism # 121 OneMany

BINARY BABA OM re-emphasizes

From void comes one & many: **OM**

ism # 122 refine duality

BINARY BABA OM sees that

For society to evolve into unity,
first we must refine duality to its essence:
unified & reduced.

Accepting the perspective of no-time,
at the speed of light, one can find unity.
Time is the result of reduced perspective,
of our unified light-mind inside our flesh-mass body.
Harmony bridges this fundamental duality.

But the fundamental duality
is beyond most people's choice to understand.
people will continue to fight over
this spirit & flesh duality.

To give people a chance to have authentic faith,
the duality default will be played out socially:

Who are the false messiahs?

& who is the anti-christ?

Who is one true ShamBoo,
the Christ/Messiah/Shiva/Maitreya-Buddha?

People arguing about this duality
will change the world.

One moment.

One day.

ism # 123 preference

BINARY BABA OM wonders

What is your reference?
What is your preference?

Are they the same?

Do you walk your talk?

Do you hum?

Some?

ism # 124 Way

BINARY BABA OM quotes

A deceased enlightened man who
had become unbalanced struggling
with too many material attachments
had stickers made that shared

GET OUT OF YOUR OWN WAY

He failed to acknowledge the irony
& experienced endarkenment

ism # 125 seed idea

BINARY BABA OM understands

EVERY PART CONTAINS THE WHOLE

Note: this is the seed idea, the paradigm summary, needed to grow into humanity's revised perspective and survivable future, justifiable in a holographic-harmonic system.

Ism # 126 Unlimited

Binary Baba Om learns again:

Just because “unlimited” is a choice—
that does not make it the best choice.

A system built around limitations
sometimes has the most freedom.

Examples:

DOE RAE MEE

ONE TWO THREE

A B C

ism # 127 Will survive

BINARY BABA OM shares

What force grants individuals
the will to survive?

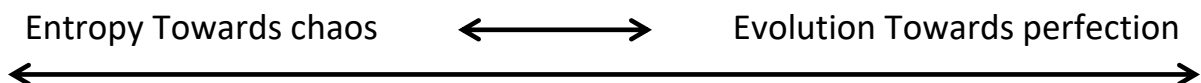

This drive is
the whole power behind evolution.

Will power opposes
thermodynamics' 2nd law,
being entropy.

Will power guides
through natural selection
toward perfection
in a God-like fashion.

Entropy does the opposite,
falling apart into disorder
rather than coming together as does life, evolution,
& the pursuit of peace & harmony of mind.

The will to survive in each of us
is the expression of God.

ism # 128 Spacetimeless

BINARY BABA OM delves within

Before spacetime, All is Empty.

There is no $E = Mc^2$

as there is no this, that, or the other things to compare.

There is no here nor there, no then, no now.

All is Void & silent. Nothing. Not two, not one.

None ... Only Void ...

Except... a hint of... the *Will* to ... nothing...

But that faint hint of Will imagines itself subtly

as a point, a moving point,

with nothing to move through,

always the same, a hint of a wave ...

Still, the constancy of the faintly imagined movement

is not enough... The Will wills to know ...

...to only glimpse

its own spacetimeless-self...

It imagines...us...& becomes...us...

We are citizens within God's Imagine-nation.

God is the source & the subject of our imagination.

We are God's image—God's dream...

Row row row your boat...

Ism # 129 Imagine

Binary Baba Om tosses about

God the Unified Mind might not be talking in words
directly to humans these days,
but humans imagine & dream
& hidden within our ideas there can be truths
that we have been blind to.

Inspiration can bring us God's messages,
but to sift through them, cleaning up the signal to noise ratio,
is still our reduced-self doing the interpretation.

We can be wrong, right, or confused,
or non-caring or over-caring.

No matter what, the best that we can do
is to do our best.

Ah...

ism # 130 if asked

BINARY BABA OM supposes

If asked if I know about OM or the Word,
I would need to say yes; that is all I know.
I would not be sarcastic, joking, or lying,
which at times are all much the same.
Om is Amen is Yahweh is Allah is the Word
Is everything.

Ism # 131 Inside

Binary Baba Om mumbles

From inside of the unified system,
the math is necessarily statistics;
probability & quantum physics.

Without being able to get outside of the unified system,
the unity of that system cannot be proved;
only discussed in terms of chance. Differently,
when perceiving from the unified perspective,
proof is not a requirement.

Chance & proof are inventions
of the reduced perspective.
From a unified perspective,
harmony is in charge.

From inside the evolving tree of life we take our chances.
But in the big picture,
the tree of life is growing exactly how it is supposed to,
leaving nothing to chance.

All is in harmony as it is meant to be.

What is *chance* to one person
is *meant to be* to another.

It is all in the perspective.

Chance is the reduced point of view
of the unified harmony perspective.

ism # 132 God Verb

BINARY BABA OM interprets history

The name Jesus
is comprised of root words
which mean “Yahweh Saves.”
In Exodus Pi*, the name for God that God told Moses
from the burning bush—is “YHWH.”
This can be translated as
the first person present “to be” verb, being “I AM”.
God gave this first commandment
to Moses before the later ten.
So we can call it the “zero commandment”.
Ground zero: God’s name is a verb.
But the word “God” is a noun.
God did not say we cannot use
all sorts of names for God,
just that every generation remembers that God’s name
is a verb, not a noun—a person, place, or thing.
We humans fight over nouns too much.
Verb on that. We must resurrect
God’s zilch commandment:
I AM.

*Pi = $\pi \approx 3.14$

ism # 133 Conundrum

BINARY BABA OM lays out

Dark matter is a *conundrum*. No, that's not a religious percussion duet.

In this universe, we have mass & energy & void.

Light is considered as energy, either a particle, called a photon,
or a wave, called a wave function.

Since Sunlight can cause a sunburn & photosynthesis & can start a leaf on fire
when shone through a magnifying glass, we know that light is energy...

& we know since $E = Mc^2$ that energy must have mass equivalence.

But since light moving at the speed of light is not represented
on the mass side of the equation, it is said that
this photon energy has no rest mass.

The extension of that to saying light has no mass is an error
that creates confusion which we call dark matter
enters when going from saying that light has no rest-mass
to saying that light has no mass equivalence.

Empty space is currently calculated as massless.

With an average three-degree kelvin background temperature
& the fact that $E = Mc^2$, there is mass equivalence everywhere.

The invisible unified wave functions of light & other bosons fill our universe.

Light has mass equivalence even when it is only represented
on the E side of the equation. Modern scientists will admit that light
has *relativistic mass*, but they also say that is too confusing so it is best avoided
in all discussions. I believe this is the avoided subject,

being that light has mass equivalence & this is the pink elephant hanging out
& being ignored in our academic living room. What pink elephant?

This then requires recalculating the total universal mass & reconsidering
the missing mass referred to as "dark matter".

The answer to missing mass seems to be light: we don't see it
since light wave-functions neither absorb nor emit light.

& in our ignorance we don't count it as mass equivalence.

The shadow-like irony: the darkness is caused by light.

ism # 134 cause

BINARY BABA OM cycles

Some natural organic patterns
in old school ponderings
are called sacred geometry
& are the effect of the repetitions of creation,
not the cause as is claimed.

The cause is the original void
with the circle-dancing particle/anti-particle pair
that with original will power become organized
as natural harmony to holographically create
& sustain everything.

The verb is the cause, not the noun.

The universe was created by
the first person present
“to be” verb:

I am.

Note: In Exodus 3:14, God told Moses that his name was YHWH, being the first person form of the to be verb: I AM. YHWH commanded that this name be remembered through all generations. Yet Jews and Christians made this early commandment from God to Moses to be too sacred to be pronounced and thus taboo to teach the public. That's breaking the third commandment (Exodus 20:7), disregarding God's will regarding God's name.

ism # 135 Set limits

BINARY BABA OM requests

Tell me your story, of what & how you have learned
& I might be interested.

Try to intently teach me what you feel you have learned
& then now you feel I must learn too,
& I will likely reject you because you have not yet
properly assessed what I already know.

If you wish to be with me,
adapt to me
because I set limits.

If you feel I do not adapt
& assimilate you enough,
I will not accept you attempting
to make me adapt against my will.
I choose.

That is my self-granted freedom.

If you are in my home
& I perceive you to be imposing
your self-perceived wisdom
then I may ask you to stop or leave.

That is my self-granted freedom.
If you do not wish to adapt to me,
it may be best for you to choose
not to be with me.

Ism # 136 Focus

Binary Baba Om notices

As someone learns new things
exciting to themselves,
to decide it is time
to share this knowledge,
one is claiming to already know.

Only by not-knowing, can one learn.

There are times for knowing & sharing knowledge,
& there are times to be humble
& be open to learning.

Wisdom is knowing
the right action or non-action
for the situation.

Wisdom is knowing how to adapt
through assimilation &/or elimination.

Due to someone focusing on things other than
physical, mental, or spiritual growth, like excess money,
one's focus on learning about God
can become weak.

It is choice.

Ism # 137 Goal

Binary Baba Om compromises

My goal
is to be unified enough at times
to subjectively join with God.
I also choose to reduce enough
at times to be able to
objectively describe God.
This dual-goal-in-one
I do not compromise,
though my methods to achieve my goal
are often compromised.

Ism # 138 All

Binary Baba Om Finds

The entire universe inside himself—
being God in entirety.
Another person
might choose to focus
on the same entirety of God
within his or herself as well.

Ism # 139 Evolution

Binary Baba Om Bubbles

Evolution, to me, seems
to be homing in on a signal
which is not being talked about much.
A light signal at the end of time should not be considered
as bound in time since a clock stops at the speed of light.
That perspective allows
the beginning & end to be the same,
like the Biblical Alpha & Omega.
The light dance that begins everything
as the vibratory Word, is also achieved by human consciousness
at the end of a period of time
& is the same seed for starting creation
& progressing through the tree of life.
The goal to achieve the end seed
is witnessed in all life forms
as the *will to survive*,
the true force behind natural selection & evolution.
Life seeks the signal
by eliminating or assimilating the noise.
Signal to noise ratio
is the essence of evolution.
God the void is the source.
God the one word is the signal.
Harmonic degeneracy provides the noise.

Ism # 140 Soup

Binary Baba Om reads it as

Religion is like a soup
that has cooked all day on the stove.

It has many ingredients,
starting with God & water.

Other things are added
throughout the day.

Even though it is still called God soup,
so many other items are added,
not all fresh,

that by night the soup tastes bad.

As people are served,
some throw out the whole soup, some eat it all,
others just pick out what they like. Atheists are the ones
who throw out the whole soup, ignoring that God
was never even lost or polluted
by the rot. For the atheist,
there is no God in the soup &
the whole soup is judged as bad,
not just the confused
human-added ingredients.

Ism # 143 Unembodied

Binary Baba Om Simplifies:

I am an unembodied consciousness.

I create the universe
of mass & energy.

I harmonize the movement to organize
the sequences of joining & separating,
eventually bringing all the needed ingredients to Earth.

I form the life of plants & animals & finally humans.

I am the unembodied consciousness
embodied in the individual life forms.

I am the One Mind
in many bodies.

I am the one consciousness
& I speak to you from my flesh form.

Hari Om.

Welcome to yourself:
one mind in many bodies.
Om Jah Amen Allah YHWH

ism # 144 Multiverses

BINARY BABA OM dreams

Universe: One Turn.

There is only one universe.

The multiverses that scientists play with
in their sandboxes are simply: us...

the one mind made into many.

Since in this hologramic universe

every part contains the whole,

we are each an entire

mind-constructed "I AM" universe.

We are each the center of all

we see, touch, taste, smell & hear.

We are each the tonal reference,

the matrix controller,

the God within the flesh.

I AM the only one... & so are you.

No two people

ever see the same rainbow.

Om Jah Amen Allah Yahweh

God is the only I Am

Note: Isaac Newton measured angles between 40° and 42° then 50° and 54° inside water droplets that produce a primary and a secondary rainbow, published in his book *Optics*. Different raindrops necessarily make up the rainbows for people standing side by side sun at the back of their heads, rainbow apex exactly in front.

Ism # 145 Geosoluna

Binary Baba Om Explains

It is lunacy for a lunatic to ignore the phases of the moon.
Ignorance is not a cure for ignorance.
Knowledge is. Understanding.
The popular Gregorian solar calendar
uses a time period called “month”,
from the same root word as moon.
This 30.4 day average cycle replaces
the 29.5 day average lunar cycle.
This is a mathematical error: $30.4 \neq 29.5$.
The Gregorian ignores the lunar cycle
& uses an arbitrary fantasy month cycle.
Society claims to take pride in seeing our cumulative self as scientific,
but our internationally agreed-upon
commerce calendars prove we are not.
The goal is to have a calendar
that relates the positions of both
the sun & the moon to the Earth: a Geosoluna calendar.
Geo-Days begin at midnight, months begin on the dark new moon,
years begin on the solstice.
To ignore natural phenomenon
that affects our body & environment
enough to make us into lunatics—is lunacy.

Note: Muslims follow a lunar calendar with months beginning on new moons. Their years do not align with the sun, so seasons wander. After including the occasional 13th month for a decade, influenced by the Jews, confusion reigned in the tenth year of Muhammad’s calendar due to no uniformity of understanding when to place the 13th month. So Muhammad fixed the problem by claiming that God made exactly and only twelve months a year to be sacred and that anything else is evil [Qur’an (sura 9:36–37)]. Referred to as, “The Prohibition of Nasi”, this 12.00 signifies that God has nothing to do with nature’s 12.37 average number of lunar cycles per solar year, meaning that God has nothing to do with nature. This is a Qur’anic contradiction.

Ism # 146 Enemy

Binary Baba Om Challenges

If you are told that anger, fear & stress are your enemies,
be careful if you believe that.

These energy fluxuators evolved into essential emotions
able to bump our inertial complacency.

If we are unable to peacefully accept a situation,
we may choose to act or not.

We are guided by the need
for a balanced & relaxed heart rhythm
to change the situation back to calm.

Anger & fear evolved to do this.

If not controlled, same as a fire,
stress can get out of control.

Lack of personal self-control is our true enemy.

Self-control is the goal.

But When the situation overwhelms,
when self-control is border-line gone,
only our prepared integrity remains.

There should be no more duality
in the adrenalin moment.

Only one doubt-free mind remains,
able to do the right thing,
whatever level of action
that may require.

Ism # 147 Loud

Binary Baba Om Holds

The heart beat is strong enough
if it is not dominated by the senses
beyond healthy function.
Our body senses are very “loud”.
Our minds’ silence holds the truth.
Our contemplations of the silence interpret that truth.
& the heart keeps everything aligned.
Our “loud” senses should not always
be our dominant references while awake,
but should be made subdominant
to the silent mind & the gentle heartbeat.
When we need self-control to properly respond
to the environment, when all else seems loud,
we seek & find that silent reference.

.

ism # 148 Wind

BINARY BABA OM

Cannot see the wind...
Only dust moving,
trees dancing,
hair floofing...

Note: In reduced perspective, the effect cannot be accurately considered as the cause. In unified perspective, separating cause and effect is not an option.

Ism # 149 time slows

Binary Baba Om experiences

When the adrenalin shift hits,
the body perspective is subdued.

Digestion stops: not necessary now.

Mental perspective, if balanced,
can shift with the adrenalin more towards the
perspective of light.

With this, consciousness lessens
the perceived value of the speed of light, C , from mass's
186,000 miles per second to a lesser speed.

The effect of this for experience: time slows.

Skiing inside of an avalanche,
the surge of adrenalin allows
the slowing of all focused-upon events.

One's ability is enhanced to be able to manipulate
the body & to flow efficiently throughout
the high speed changes within the dynamic environment.

Time slows & you rescue yourself. Nice.

Note: The newest named brainwave octave is *gamma waves*, shown as 32-64 Hz. This perspective requires a resonating balance to maintain, a variety of brainwave octaves being accessed simultaneously. For instance gamma at 40 Hz halves to 20 Hz, beta, which halves again to alpha, 10 Hz, and again to theta, 5 Hz. All of these constitute the same harmonic pitch class (different octaves of the same tone). When a person becomes this balanced in such an extreme differentiated mindset, this quantifies popular qualifying terms, for instance, being *in the zone*.

Ism # 150 Love Fall

Binary Baba Om ponders:

The Love Fall is irrational,
obsessive, engulfing, compulsive & encompassing.

When falling in love
in obviously incorrect situations
only a clarity of mind can rescue:
logic & meditation.

The logical disassembling
of the love emotion is the fight
& meditation into emptiness is flight.
To not fight & flight from our own overwhelming
emotions is to give into them,
whatever may come.

Falling in love may lead to a fairytale,
be it happily ever after
or the confronting
of inner & outer darkness.

Ism # 151 Eye light

Binary Baba Om Imagines

Imagine being a pulse of light traveling
within a spiral pattern,
channeled through crystalline fibers.

Imagine this light that you are
can see just like an eye.

You need only see a very limited reality—
just four primary colors. Imagine you pulse & move along
gathering color information along the way.

The four primary colors are your whole alphabet.
The letters build words & sentences, paragraphs & stories.

Imagine your spiral motion in one direction
is mirrored by a pulse of light moving in the opposite direction through
an intertwining spiral. Pulses passing pulses, all gathering color data,
moving & correlating the data throughout a system.

You are a pulse of light within the DNA reading the angles
of the connections of the nitrogenous base ladder rungs
to the spiraling sugar-phosphate backbones.

Each angle passed reveals itself to be between 50 & 54 degrees.

These angles are the same as our eyes perceive
as secondary rainbow colors in water droplets.

The pulsing light within DNA records angle data
& the whole human body can correlate each codon
of 3 nitrogenous bases into one amino acid, & beyond,
into proteins & bodies. Hallelujah.

Note: Linus Pauling measured angles between 50° and 54° produced by the joining of each of the four bases to sugars. Isaac Newton measured similar angles between 50° and 54° inside a water droplet that produces a secondary rainbow.

Ism # 152 six eight

Binary Baba Om differentiates

Look at a checkerboard pattern.

Choose one center square. That is your zero.

Around that are 8 squares.

That is your fundamental tone: 1 X 8.

Then a ring of 16 squares: 2 x 8.

Then encircling are: 3 x 8 & 4 x 8...

This is 2-D (two-dimensional) 8-space.

Now look at a brick wall pattern—
bricks staggered 180° out of phase.

Choose a zero-point center brick.

Count the ring of 6 around the zero: 1 x 6.

This is 2-D 6-space: around that are rings
containing 6 x {2, 3, 4...} bricks, into infinity.

6 & 8 spaces are like 6 & 8 music beats—

6 is the verb, the rhythmic motion

& 8 is the noun, the rhythmic stability.

Try counting first 6 then 8 beats while doing
the same activity, like walking, running, or biking.
6 can activate change & 8 can maintain sameness.

Compare various cultural drum rituals
to find this historical 3 to 4 beat ratio
& the various events correlated in time.

4 is the fundamental tone pitch class.

3 & 6 are Sol to Doe's {1, 2, 4, 8...}.

Sol stimulates change. Doe stabilizes.

Music results.

Ism # 153 Incomplete

Binary Baba Om discusses

Our essence is our consciousness.
Our minds are light perceiving through flesh:
our One Mind & many bodies.
The mind is whole by its nature
of assimilating the holographic reference.
Yet one's reduced perspective is of the self as flesh.
This makes us feel incomplete.
Sex gender of the body, either male or female,
is each incomplete without the other.
The experience of love-lust in the mind
is the body communicating its need to fulfill?
Even as the entire flesh organism goes imbalanced,
the whole I Am self that is light is remaining whole,
whether the person acknowledges this or not.
Only the body is screaming to be fulfilled
& is enabled to become whole.
The spirit self is whole by its nature.
Being energy-mind & mass-flesh,
the self must find the balanced combination
to attain wholeness in perspective.

Ism # 154 critic

Binary Baba Om protects

Criticize me as you wish.

I cannot stop you—neither from
your ignorance nor your wisdom.

I build my own dome of Om.

I daily clean my room
& empty my mind.

My notes are complete.

I let in who I will & dismiss the same.

I protect my own empathic self
from perceived ignorant criticism.

I sit when I sit & I Om when I Om.

I will do as I do & I will be as I am.

If your criticism is given
without proper consideration,
then beware of the cosmic mirror reflecting back at you

all of your own errors,

giving you the option

to be your own best critic—

as with all of us.

Your critique of me is possibly
a contorted critique of yourself.

Hari Om.

Ism # 155 Now or not

Binary Baba Om Rants

I don't want to make plans with you.

I make as few plans as I see correct.

Dentist, airport, like that, those need appointments.

But with individuals in my experience, most people don't show when they say they will. I don't want to wait at that place & time for a no-show because it only has me feel stupid.

So I try to not make plans unless I deem them to be essential & reasonably predictable. You need my help?

If I see it correct for me to help, my answer is the question: now or not now? After hundreds of words I get the clarification that it is not now. So I say,

tell me when it is "now" that you are ready.

But you want me to make a plan.

I respond that generally I don't want to.

Too many times plans have burned me.

I want to make as few plans as possible. Please respect that.

I will help you now, or not now.

If we plan & you don't show, I will judge you.

& for judging you, I will judge me.

& that won't be something I will choose to repeat.

So let us not make a plan, please...

When not-now becomes now,
then let us choose... plan becomes action.

Ism # 156 integrity

Binary Baba Om feels

If one who has glimpsed integrity
is not following enough
on the path of integrity,
then pieces of one's life disassemble...
one has accidents, errors, confusions.

If one claims to have desire
to walk that path of integrity
then intent must be turned to unity—
& proper purpose must be attained.

One must maintain a constant choice
towards the reference of harmony—the one tone—
a daily healthy focus
for body, mind & spirit.

One step, one walk
one attitude
one source
om

Ism # 157 circle

Binary Baba Om Rolls on

Some say the circle is not what I say:
the circle has all of the information
to make the whole universe.

The circle is the shape of the holographic reference wave,
forming the cosmic geometric constant.

Because of the circle's consistency,
every part contains the whole
& relates to the center the same.

The circle is the simplest form, yet contains all complexity.

Some people crave complexity
& believe themselves masters of it,
even beyond alignment with nature.

Some people refuse to let their simple attitudes to return
even when nature demands.

Society builds much around the egos of complexity.

Complex minds make complex comments
containing statistics & perceived proofs
regarding this & that as popular subjects.

Yet the wheel spins even for them
& ker-plopp... change brings back simplicity.

Eventually we must let the circle ring.

The resistance is part of the equation.

Hari Om

Note: The equation is called Ohm's law: $P = RI$, where potential difference (voltage) (P) equals resistance (R) times current (I). Constant resistance R allows P & I to vary together. A circular rub allows the most constant resistance.

Ism # 158 idea

Binary Baba Om experiences

Finding a big idea is only a single event.
Processing the validity & the possibilities
of that one idea can be a life's work.

Then the idea must be shared.

The sequence is long: research, development, outreach.

For some discoverers,
research & development come easily,
but outreach can seem near impossible.

Ism # 159 Change or no

Binary Baba Om balances

Evolution can be observed as basic duality:
change or no change.

Life, cells, & DNA all adhere to the basic duality:
activate or do not activate.

Life choices confront the same:
do it or don't.

Choose: on or not on,
Wait or do not wait.

Ism # 160 Action

Binary Baba Om observes

Action can be subtle or gross
& may even communicate loudly—
though the message
still may not be clear.

But with words, a clear message is not guaranteed.
For a strong signal to noise ratio: intent is key.

Ism # 161 the master

Binary Baba Om maintains

A self-proclaimed master
who does not know when
to not be the master
is no master.

Or maybe, the student
has self-obstructing habits
& the master is just revealing this
using information overload as a tool.

Ism #162 **I + U = B**

Binary Baba Om calculates

Information Overloaded Society

Plus

Unified Field Theory

Equals

Blossoming Wisdom Syndrome*.

*Including inherent
signal to noise ratio.

Ism #163 responsibility

Binary Baba Om to be

If I am not socializing enough,
I improvise myself into my own
social therapy: I interact more.

If I am not getting enough exercise,
I engage in my own exercise therapy

& break through my own stagnating inertia.

If I am not studying enough, I organize my own academic
therapy. If my mind is not balancing, I slide into my own
meditation therapy. Like that...
my personal responsibility code.

Ism #164 swell time

Binary Baba Om imagines

From original void the universe begins
as only a single point of zero dimension, 0-D,
which we call Om, Amen, Allah & YHWH.

For a new perspective:
the 0-D point spreads out,
imaginatively becoming two points.
The virtual 1-D line distance between them
is still only the one imaginary 0-D point.

Imagined end points are both Om.
the line swells between the two points,
expanding into a tube that swells towards the center.

This entirety is all of creation.

The separations represent
the time & space perspectives.

Living inside this
unified imagined mind construct,
we humans know time & space as real.
Yet the whole thing is all just OM.
Ride the virtual wave.

Ism #165 my best

Binary Baba Om blurps

I cannot do my best
for everyone else
unless I know
who I am first.

Ism #166 re-member

Binary Baba Om wanders

How far into infinity
Do we wish to go?
Once deep into infinity,
will we still be able to
re-member the one?

Ism #167 small talk

Binary Baba Om requests

Make small talk
about
big important subjects.

For example:

“Hey, how ‘bout them
unified field theories?”

Ism #168 time is

Binary Baba Om understands

Time is Om

Note: “In the beginning was the Word...” John 1:1. This shows that once there was time beginning, there is the Word, being *Amen* in Revelations 3:14, *YHWH* in Exodus 3:14, *OM* in the Upanishads, *Allah* in the Qur’an, and *Jah* in King James Psalms 68:4. Contrary to popular cliché, time is not money, though humans sell their time for money.

Ism #169 old school

Binary Baba Om rattles

At one point in history, old school spiritual revelations
began to be shared with the general public.

At first the trickles of ancient wisdom,
even with signal & noise all mixed together, seemed so wise.
With time, old school teachings flooded the modern world.
As novices to old schools accumulated repeatable words,
they began to praise their own wisdom. On street corners,
they shared regurgitations from their pulpits & milk crates.
With time, old school knowledge was available to everyone
& self-proclaimed wisdom became common.

Eventually, self-proclaimed wisdom closes listeners ears.
As old school science, religion & art gets so evenly distributed
across the social pond, the pond goes flat with no new waves.

New school ideas beginning to rise, to revive
the degrading situations, only touch closed ears
& are not recognized since they bring
no immediate social power.

Eventually the
new school breaks through the viscosity of the water's surface
& the dropped intellectual pebble enters the pond.

Ripples spread out & influence the whole.

Ears hear only what the egos allow,
but the waves are rock'en...

Ism #170 omniscient

Binary Baba Om speaks

Yes, every part does contain the whole.

That means that every part—
every individual—is omniscient.

Since the whole is everywhere,
the individual is also omnipresent.

But even as the ego-self
might act omniscient,
the ego-self is still ignorant,
being stuck with the flesh,
struggling to learn
as time dictates.

Ism #171 alone

Binary Baba Om whispers

In meditation
we are all alone...

Yet there is no
Loneliness.

Ism #172 worth

Binary Baba Om turns

There is just One timeless “I Am”
dwelling in individual bodies
Which are stuck in time.

Timeless “I Am” must ask its reduced time-full “I am”
if creation is worth it.

“I Am” created it all out of will power
to know—to know self—
to know separation—to know time.
Is creation worth it?

Yes & no.

Since all came from the void,
the conservation of peace demands
that the two perspectives
of worth-it & not-worth-it be exactly equal.

Therefore, since we are already here,
& with “to be” and “not to be” being equal,
we most logically would
choose the default:
to continue being.
& to give thanks.

Ism #173 one tone

Binary Baba Om oms

God's name is One tone.

One tone is the source of many tones.

Chaos is too many tones
forgetting the one tone.

One tone is also written as monotone.

Many people find the one tone of God
to be monotonous.

But their boredom comes from their addiction
to unnatural stimulations & illusions.

Creation is a verb.

I Am is a verb.

God's name is I Am.

God is a verb.

The one tone is always in motion.

Since people are also verbs,

Be subtle to join God.

Surf's up...

Ism #174 Shambho

Binary Baba Om intones

Christ will come again.

He will also satisfy Jewish foretelling of the Messiah.

This is a worldwide thing

& not everybody knows the Christ story.

Other cultures have their own stories.

The future Buddha is the talking Buddha, the Maitreya,
the laughing Buddha.

Hindus await their creator-destroyer, Shiva
—the dude with many names.

He is Nataraja, the lord of the dance,
the dance that created everything.

He is Omkareshwar: the lord of the universal Om sound.

He is Shambho.

Shambho is coming. Shambho is Christ.

Shambho is already here.

Shambho awaits the divine clock to move into position.

Time tells our story.

One man. One Idea. One Message:

God is a verb and is complete in every part.

Note: “But of that day and hour no one knows, not even the angels of heaven nor the Son, but the Father only.” Mathew 24:36. And more words from a modified version of the song "Hallelujah" by Leonard Cohen: “And even if it all goes wrong, I'll stand before the Lord of Song, With nothing on my tongue but Hallelujah.” Hari OM.

Ism #175 lies

Binary Baba Om grumbles

American children are raised with annual traditions
from spiritual origins that have become
materialistic distortions on the children's brains.

Christmas in the atheistic
& God-ignoring agnostic family homes
has left out the Christ-Mass story
& leaped onto Santa's sled.

Children are taught this fantasy for fun & joy & love,
but for some children it is just a lie & not clean.

Easter is not just about chasing after colored hardboiled eggs
that some imaginary Easter bunny left behind.

Halloween: joyous make-believe?

Or lies & deceit & confusion,

Lost between Christian, pagan & atheistic.

What is the message to the child here?

God is taught to be illusion, flying reindeer are fact.

On April fool's day it is okay to lie all you want.

But to disagree with these sweetly packed days of lies
is to be called unkind words for not joyously joining the parade.

Some children grow up wondering about truth.

How old do they have to be before they deserve it?

the lies have just become built in,
remaining for generation after generation?

Ism #176 pressure

Binary Baba Om shares

One confusion goes back to an arbitrarily erred decision
made by JJ Thomson, discoverer of the electron.

The vocabulary has haunted science ever since.

The confusion is that the positive pressure
is on the negative electric pole.

When normally talking about pressure,
the flow is from positive to negative, from high pressure to low.
Air goes from high pressure zones to low & causes air to escape a tire.

Water pressure resulting from the gravity of a water tower
goes from high positive pressure to low.

Only in error-soaked languages of electricity, physics, chemistry, etc.
where electrons are called negative instead of positive,
do we have this confusion. When there are a lot of electrons,
normally called high or positive pressure, instead the electric pressure
moves from the negative electric pole towards the positive pole.

This flip flop came about because electrons could have been simply
named by JJ Thomson as positive, & then it would all be correct today.

To fix this error now, we would have to reverse our social inertia by
rethinking all charge names; protons, quarks, electrons, positrons, etc.

Or we could just not change

& continue to live our so-called scientifically enlightened lives
while saturated in our non-scientific world of confused vocabularies.

This is a sin as our children are taught confusion rather than clarity.

I believe in a correct order for our species to survive.

We must fix the whole thing.

Ism #177 Confusion

Binary Baba Om organizes

If a child witnesses much confusion
while growing up,
there are several paths the child may walk.
A strong child would grow up questioning
the confusion, questioning authority,
maybe finding solutions & organizing them
into usable vocabulary.

One child realizes that only
by exploring the human ability
to experience unity,
could & would all confusion
ever be able to be ordered.
The child makes this his goal
& grows up, hoping
to eventually share
his unified field theory.

Ism #178 movie

Binary Baba Om watches

Watching a movie
we get so caught up in the moment
—like life.

The movie must be made
before we can watch it.

But in real life
many people don't believe
the future is already made.

I believe that
we each have a script.
We just don't get to read it
in advance.

But we do get to watch
ourselves live in action
inside of life's movie.

Note: At the speed of light, the clock is stopped and now is forever. Universal information stored as light includes all time enfolded in one NOW. Our minds are light in flesh bodies, so we can scan a history book or DVD and let our perspective fly backwards and forwards through the time perspective of the flesh.

Ism #179 DO RIGHT

Binary Baba Om modifies anonymity

1. Many people do better with silence in the morning.
2. If I want some, so might someone else.
3. Just because I want some does not mean others will.
4. If I use something, I'll take care of it.
5. If it belongs to somebody else, I'll seek permission.
6. If I borrow it, I'll return it.
7. If I move it, I'll put it back.
8. If I unlock it, I'll lock it.
9. If I open it, I'll close it.
10. If I turn it on, I'll turn it off.
11. If I break it, I'll fix it
12. If I can't fix it, I'll ask someone who can.
13. If I make a mess, I'll clean it up.
14. If I don't want it done to me, maybe I should not do it to someone else.
15. Everybody makes mistakes. Ones who won't admit errors will learn slower.
16. To do the right thing sometimes requires breaking the rules.

Ism #180 WOW

Binary Baba Om giggles

What do you say
when MOM flies upside down?

WOW

What do you say
When your OM gets flipped around?

OW

Ism #181 silence

Binary Baba Om feels...

Ism #182 Anger

Binary Baba Om experiences

If One falls off a cliff,
is it functional to be angry at the cliff?
It may be better to learn respect
for one's own limitations.

If a person does another person wrong, & has stopped,
is it functional for either one to remain mad?

The cliff cannot continue to be harmful
to the person that fell.

That harm only comes from
that person not respecting reality.
One's anger will be within one's self,
not emitting from inside the cliff.

If somebody does another harm
& if the harmed person's anger lingers too long,
unnecessary pain gathers.

The pain & anger need to be acknowledged
& referenced properly or the emotional fire will spread.

One must focus the energy & use it,
or accept it & lose it. How?

Ask yourself: What is my reference?

Only the correct answer to that allows one
to assimilate or eliminate any energy problems,
allowing evolution of the mind.

Ism #183 subjected

Binary Baba Om quotes bible

The story of Jesus is one of a man
who identified himself with the fundamental tone:

“The AMEN is Jesus Christ...
the beginning of God's creation...
That is why we utter AMEN through him,
to the glory of God.¹”

Jesus became aligned to be humanity's only fundamental tone,
the word, though Jesus must give up being
the only one in order to offer
the source, God, to everyone:

“When all things are subjected to [God], then the son himself
will also be subjected to [God],
that God may be everything to everyone.²”

“But of that day & hour no one knows,
not even the angels of heaven nor the Son,
but the Father only.³”

This says the Son is ignorant of God's timing
in the plan of the second coming.
Jesus gets to know only what God
deems necessary at any time.
God only feeds information to Jesus
& the rest of us on a need-to-know basis.

Note: 1. The New Oxford Annotated Bible (1977), Rev. 3:14, annotation, 2 Cor. 1:20
2. The New Oxford Annotated Bible (1977), 1 Cor. 15:28
3. The New Oxford Annotated Bible (1977), Mathew 24:36

Ism #184 numbers

Binary Baba Om counts

We use a base-ten number system.

ten numbers: Start with zero {0}

& use {1, 2, 3, 4, 5, 6, 7, 8, 9}.

Binary is a base-two number system: {0, 1}.

Note that "2" is not in base-2.

Note that 3 is not in base-3: {0, 1, 2}.

A clock is a base-12.

The 12 is not in base-12.

The clock's 12 is really the 0.

A chromatic octave, meaning 8, is really only a base-7 system,

with no zero: {1, 2, 3, 4, 5, 6, 7}.

The eight is really the one:

Do re me fa sol la ti do

1 2 3 4 5 6 7 1.

Including a zero, the alphabet makes

a base-27 number system:

{0, a, b, c, d, ... x, y, z},

followed by {a0, aa, ab, ac...}.

In this base-27 system, a0 = 27.

Note: We already have memorized the twenty-six letters of the alphabet. This would allow a base-27 number system, where {Ø = zero, A = 1, B = 2, C = 3... Z = 26}. It follows that:

$AØ = 27$; $AA = 27 + 1$; $AB = 29$; $BØ = 2 \times 27$; $CA = (3 \times 27) + 1 = 82$;

$AAA = 27^2 + 27 + 1$; $BAA = (2 \times 27^2) + 27 + 1$; $AAAA = A^4 = 27^3 + 27^2 + 27 + 1$;

$A^5 = 27^4 + 27^3 + 27^2 + 27^1 + 27^0$; $A^x = 27^{(x-1)} + 27^{(x-2)} + \dots + 27^{[x - (x - 1)]} + 27^0$.

When a base-10 number gets very long, base-27 stays shorter. Using the brail system or Morse code as models, the 26 letters and zero might be used as a *hole-or-no-hole* computer code, able to replace the binary code when needed working with very large numbers.

Ism #185 white knight

Binary Baba Om reads

Merlin taught young Arthur
that a philosopher's business
is to make ideas available
& not impose them.

Merlin showed Arthur
the perspective of an ant's world
where their binary vocabulary
only included: done & not done.

Merlin also taught Arthur
that the best way
to overcome being sad
is to learn something.

Note: These paraphrases are from the 1958 book, *Once and Future King*, by T.H. White. Divided into three sub-books, one was named *The Sword in the Stone*, which in time became a famous title and legend theme. Merlin in that book grew younger through time as everyone else grew older, so his past was everybody else's future.

Ism #186 God talk

Binary Baba Om Ponders

If my reduced mind gathering data on a need-to-know basis
needs more information from my unified mind,
possibly deliverable as intuition, instinct & gut feeling,
I watch activities of my imagination & of other people too,
be that in conversation or from a movie. I watch situations arise & fall.
I read purposefully as well as randomly.
I meditate. I eat. I sleep. I exercise. I contemplate.
My ideas can form in one flash, maybe followed by more flashes,
or maybe in a gradually more & more complex daydream.
Actions or non-action follow as I begin to believe in the idea,
eventually filtering down to:
research, development & outreach.
I do not know if God, the unified mind,
gave me the idea or not.
I can only trust that my unified mind, being God,
Is able to guide my reduced mind,
being my identity perspective,
If so, I need to pay attention & acknowledge timings & say “got it”
& sometimes do nothing about anything.
I must take time to feel if I have wrong perspective or intention.
Like our body does not know we need more oxygen
as much as it knows that it needs less carbon dioxide,
I feel that I know more about what I don't need
than I know about what I do need.
I trust myself to feel my way through this life,
adapting with all my tools, internal & external.
I often am not sure what is right.
But quite often, with time,
I can be quite clear about what is wrong.

Ism #187 New idea

Binary Baba Om accepts

Introducing a new idea is difficult
because the idea needs to be judged.

How easily can a judge that does not yet understand
a new theory actually Judge that new theory?

If the idea is too many steps ahead
of the judge's comprehension,
then the judge lacks the ability
to recognize the important changes
& therefore the judge might judge
a new valid theory as junk.

We are now in an age when big theories in science
& big epiphanies in spiritual matters
have not made it into the public's eyes for a long time.

Scientists & spiritual leaders
are not equipped to judge
something radically new.

So the ideas need to make their way into the minds
of humanity in more creative ways.

Hari OM

Ism #188 JahOm

Binary Baba Om shares

I use God's name of Om
& God's name of "I Am",
to be one with God.

I use the name Jah to talk about God
as if God were separate.

I use Jah objectively
& I use Om subjectively.

Both Jah and Om are the same one God.

Before I leap into the unknown,

I hope Jah is guiding me.

But while I am flying,

I OM.

Note: Jah is found in King David's Bible, *Psalms 68:4*. Jah is just one translation of the name that God gave to Moses, being YHWH (I Am) from *Exodus 3:14*. The ancient Hindus introduced a Sanskrit Word, Om, into the book titled *Upanishads*, later assimilated into Buddhism and sometimes spelled AUM. In 1965, a Spaniard named Juan Mascaro translated *Upanishads*, *Katha*, part 2: "That Word is OM. That Word is the everlasting Brahman." Brahman is defined in *American Heritage Dictionary* as: "The essential divine reality of the universe; the eternal spirit from which all being originates and to which all returns."

Ism #189 Enlightenment

BINARY BABA OM sees

Intoning the constant universal source tone
stimulates harmony & allows alignment
of the human mind, body & society with God.

Enlightenment can be both safe & not.

A person may slip into the perspective of a wave function of light
in a variety of ways.

This leap from reduced to unified consciousness can happen suddenly,
yet assimilation or elimination of the experience may take time.

A plethora of vocabularies avail themselves
for expressing or suppressing the experiences,
though a vocabulary's existence does not guarantee
its high signal to noise ratio.

In a hologramic universe,
every part contains the whole.

Any physical trigger can thus be interpreted
as being the underlying spiritual cause
of the unifying paradigm shift.

Anything can seem to be the universal fixed-point,
existing in everything at the same time.

Someone dealing with the unifying shift can have difficulty
adapting again to reduced perspectives.

A person may ignore their body's needs
for water, food, sleep, personal obligations, or the laws of physics,
such as gravity, believing their body to be all light
or only imaginary, allowing them to believe they can fly.

Enlightenment is known to be a difficult path,
said to be like walking on a razor's edge.

Note. From Chinese Tao Te Ching # 55: "Harmony experienced is known as constancy; Constancy experienced is called enlightenment." Two books sharing the difficult passage through enlightenment are: *Zen and the Art of Motorcycle Maintenance* by Robert Persig, and *Eden Express* by Mark Vonnegut, Kurt's son.

Ism #190 Games

Binary Baba Om Warns

If you want me to accept a participating role in your story,
but I do not want to be a player in your game,
I will politely tell you: no.

I may or may not give an explanation.
Even giving an explanation in some situations
puts me into your game.

If you insist I participate in your dream,
and if I have not changed my mind,
I will say No again—likely more firmly.

Maybe if you continue to impose, at one point
I will communicate in an unexpected way that you are imposing
& that you should stop. At this point I am like an atom
with my electrons orbiting the nucleus.

When electrons get excited, they may jump
to a higher energy level.

You might have just increased my energy level.
If so, often the only word I will say is either “NO” or “Stop”,
voiced very loudly. Very. Or I may just stand & leave silently.
At what point do you get the message that you are imposing?

Can you only be with me by trying to dictate my actions?
if I do not believe your game is healthy for me,

I must refuse it as being imposed,
even if you believe it is just being made available.
Once I am not subject to your energy imposition,
like the electron field, I relax.

A relaxing electron field lets off light.

Ism #191 lib

Binary Baba Om modifies

Mr 8 8
Mr Not
O s a r 2
C m 0 0 0 0?
Lib
Mr 8 8 !

Note: This is taken from a riddle whose origin may not be known. But now it has been modified. Clues to understand this: 1) it is a conversation between two simple people with Appalachian accents. 2) Lines 1, 3 & 4 are one voice, and lines 2, 5 & 6 are the other. 3) What looks like two eights are read as “holy men” and what looks like four zeros are read as “circles”.

Ready? Say it with the right accenting and toning, changing from person 1 to person 2:

1: Them (‘em) are Holy Men.

2: ‘Em are not.

1: Oh yes they are too,

1: See ‘em Circles?

2: Hell, I’ll be,

2: ‘Em are Holy Men!

The original first and last line said instead: M R Ducks.

Instead of circles there was: C M Wangs (wings).

Ism #192 contradict

Binary Baba Om questions

One problem I trigger socially is because I listen too carefully
& then I ask questions of the person talking
when I don't understand their point or motivation.
I seek to clarify my confusion about their message
& the speaker can become offended that I don't understand.
They feel they spoke perfectly clear & therefore imply that I am an idiot—
& even if that is the case, they still wish to continue telling me their words
even though I am not yet caught up. As they begin telling me more,
I say again that I need to catch up to understand.
I will not pretend to listen. For me listening requires comprehension or dismissal.
Either the sender must find a way to package the message differently
or I must stop listening. I had this problem very often with teachers in school.
Even if I had the top grade in class, I still might not understand the point.
But without a relaxing of the messenger's ego
& a rephrasing of the desired message, I will not be able to receive.
The messenger repeating the words louder will not fix the problem.
I believe the actual problem is that often the speaker doesn't know
what they are pretending to say, or they have taken such a simple idea
& added so much superfluous information that there is no cohesion.
Yet they refuse to admit this to themselves,
so certainly they cannot admit this to me.
If I am listening too well to a speaker not paying attention
to their own words or meanings,
this problem might occur. I listen too deeply.
I also read with so much effort, aiming for such high comprehension,
that I cannot stay with certain writings. If I am not invited to reorganize
these people's brains enough to be able to understand them,
then I must bow out.
My insistence of myself to listen well to someone
who is also insisting on me listening
can cause these ironic problems.
So be it.
I Om.

Ism #193 proposed

Binary Baba Om cries

If a proposed science theory hints at a whole picture,
it is difficult to get it judged fairly.

Terms like holistic, wu wu, & new-age
get slapped on any unification theory,
condemning it to no peer review.

What if Einstein was correct & there is a unified field?

What if Darwin was right

& all life here on earth is complexly interconnected,
not just here & now,

but everywhere at all times—past & future.

But twenty-first century scientists are condemned
for touching outside of the reduced material confines
of their academia.

Big new ideas have not been introduced for a long time.

Even though technology thrives,
theoretical science is in the doldrums.

Science reaches equilibrium when no new pebble
has dropped on the calm social pond.

So when the new idea comes along,
judges assume they are fit to block any pebble,
especially for completely unfamiliar ideas.

Reasonableness demands open minds.

Closed minds are the result of people believing
they are protecting themselves from stupidity.

What if the society-judged-stupidity
is really the next step of evolution?

Ism #194 one game

BINARY BABA OM invents

To begin the one game, let One equal God: $1 = \text{God}$.

Then let one whole individual stand under God:

$1/1 = \text{integrity Individual}$.

According to this thought

$\text{God} = 1 = 1/1 = \text{integrity individual}$.

The one game thus has every whole individual merged
with the complete God & all is one.

if the individual gets lost in duality,
then: $1/2 = \text{duality individual}$.

What if the duality individual does not accept God above?

Then the duality individual flips the $1/2$ to be $2/1$, and erases the one.

A duality individual dominating God is losing integrity,
so $2/1 = 2 = \text{schizophrenic individual}$.

Now God is chosen to be gone for this individual, though is not really.

The schizophrenic individual may want to be more,

& may become more, as in $3/1 = 3$. With distorted philosophies,
this trinity individual may wish to dominate all dualities & $3/1 = 6/2$.

Now this hexed person claims to be the master of dualities
& is forgetting the 1 completely. Brain waves are not relaxing.

Heartbeats are not grounding. The person loses integrity
& seeks solace again, rediscovering: $6/2 = 3/1$.

With humility of becoming $1/3$, this trinity person may choose
to be back under God but has lost perspective of self.

Three never rests & an integrity individual is meant to rest.

The $1/3$ individual works back to duality, to $1/2$.

It is not until deep meditation is practiced that $1/2$ returns to $1/1$,
maybe in time for flesh death. This is the time to be ready
to be $1/1$, for this is the end of time. God waits.

Ism #195 living space

Binary Baba Om examines

Diplomacy among humans requires agreement upon certain definitions: community space verses private space & what is respectable as host & guest.

A private space has a host who can invite guests.

If guests try to become the host without the host willing this, trouble can occur.

If the host is too weak to remain the host, be that physically, mentally, financially, legally, socially...

trouble can occur. If a private space host attempts to merge community space into their own private space, trouble can occur. Every life form needs at least some private space, the minimal amount being the size of the

body. Diplomacy requires defining carefully:

community space vs private space,
& tolerable host-guest relationships.

The goal: the host's kindly rule
over their private spaces & guests.

Respected guests are more able to respect in return.

All hosts & guests need to respect the existence
of community space & of private spaces.

Good diplomacy dispels trouble.

Ism #196 the club

Binary Baba Om recites

A child grew up & saw the world differently
than his peers, teachers & parents.

The child had to explore more on his own
for the other people could not answer his questions
& more than not would get mad just for being asked
about things they did not think about.

So the child grew
& his ideas grew & research & development grew
& the child began to reach out. But people in charge
of knowledge & learning asked the kid not for his ideas,
only for the stamps proving his obedience
to his non-existing teachers
& what praiseworthy publications
the kid had achieved in their circle of
high-paid friends' self-glorifying journals.

The child responded: I have zero of those credentials.

The academic judges said "Sorry kid. Go away."

Still wishing to share his conclusions even though
proud scientists would not listen, the child adapts his learning
to toys & games & songs & stories & poems & art.

But even the artists have no category for these new things
in their stagnating world of ideas. They also deny admission
of the kid's new inspirations into their club.

So the boy sits & contemplates this.

Time passes.

Hari OM

Ism #197 $x f \leftrightarrow \text{Om}/x$

Binary Baba Om plays

A wavelength (λ) is a wave trough
& a wave crest—both up & down—

like a top half of a circle followed by a bottom half.

The start & end points

have the same initial angle & direction.

Nodes are the quiet points between
the vibrating troughs & crests.

A vibrating string's fundamental tone
is only a single crest up or a trough down: $\frac{1}{2} \lambda$.

Now the fundamental tone's math term $\lambda/2$
can be simplified with a new symbol.

Om (Om) is used to represent the vibrating stringlength (L)
between nodes: $1/1L = \text{Om} = \lambda/2$.

This Om relates in all situations to the fundamental tone's frequency,
be it the start of the universe or tuning a mandolin.

Stringlength vibrating $\text{Om} = 1$ has a frequency of $f = 1$.

The Fundamental frequency is also the same frequency multiplier
separating each consecutive overtone: {2, 3, 4...}.

This frequency-multiplier-set reciprocates to reveal
the stringlength ratios: the first nodes for each overtone
are located along the whole stringlength: {1/2, 1/3, 1/4...}.

If the vibrating string's fundamental frequency, f , is multiplied by 3
as the whole stringlength divides into multiple arcs,

this $3f$ coincides with an equal but inverse relationship
with the length between each nodal point on the vibrating string,
being $\text{Om}/3$. Simply: $x f \leftrightarrow \text{Om}/x$.

In $E = M c^2$, the speed of light (c) equals frequency times wavelength:

$$c = f \lambda.$$

For fun we can rewrite $E = M c^2$ to be $E = M (2f \text{Om})^2$.

Ism #198 ohm

Binary Baba Om reexamines

$P = RI$: potential difference (voltage) (P)
equals resistance (R) times current (I).

This is George Simon Ohm's law used for electricity:

ohm is the unit of measure of resistance,
amperes are the units for current,
& volts for potential difference.

1 volt = 1 amp x 1 ohm.

How about using this $P = RI$ equation
to examine activities of the human mind?

The electric currents in the mind result from potential differences
released as synapses between neurons.

Channeled through resistance, potential difference in a brain
may be caused by a difference of opinion.

The resistance may manifest as arguing
& the current is from the electrical discharges created in this situation.

When the resistance is kept constant,
the potential difference & the current
can vary together: predictably.

Like a water tower has gravity for the potential difference,
the pipe provides the resistance & the current is measured
as the water coming out of the faucet.

If the water pipe is made from floppy rubber,
the resistance will not remain constant
& the current will not always vary directly
with the potential difference. Chanting the sound of a circle,
as in God's names of Om, Amen, Allah, & YHWH,
can provide the constant resistance to be able to balance
the discharges in an active brain.

Gnaw on that one.

Ism #199 n

Binary Baba Om quantumizes

The dance of possibilities
defines the field of probabilities.

“n” is for number. Possibility n
must exceed probability n

in order for all possibility to contain all probability.

Possibility n manifests as a 2^n dance.

$n = \{1, 2, 3, 4, 5\}$ is set in motion
by two separate but yoked source points.

This dance then expands into spacetime’s
probability fields defined by $2n^2$, where $n = \{1, 2, 3, 4\}$.
These probability fields manifest as eight electron shells
forming all atoms in $2n^2$ creation:

$\{2, 8, 18, 32, 32, 18, 8, 2\}$

—this totals to a maximum of 120 elements
within the periodic table.

The dance of possibilities creates
the fields of probabilities.

Our minds dance through dreamed possibilities
to manifest probable outcomes, being reality.

What are the odds?

Ain’t life great?

Ism #200 Non-harmonic

BINARY BABA OM lays out

Harmonics function in the body & mind—
& chromatics, being the world's popular musical tunings,
are non-harmonic & can damage our harmonic essence.
Chromatics create tangential cycles in our minds & bodies
that loop over & over again,

heating & deteriorating preferred healthy cycles.

A paradigm shift to life sciences based on harmonics
& grounded in hologramic reality

presents a system that must constantly renew itself:

life must remain aligned to harmonic energy
since entropy naturally disassembles all order.

Entropy is a runaway harmonic system.

Investing fundamental harmonic energy
is the only way to overcome entropy.

In this model, humans are also required by nature
to periodically realign with harmony, like eating an orange,
even if harmonic alignment seems chaotic,
like an earthquake. It is all perspective.

Harmony dominates chaos,
& then harmony degenerates to chaos,
& then harmony dominates chaos,
so harmony can again degenerate to chaos.

Nice dance... shall we?

Ism # 201 space odyssey

BINARY BABA OM zones out

Accelerating towards the speed of light,
a massive object is said to get more massive
until at that ultimate speed it is infinite mass.

But there is not enough energy in creation
to allow infinite mass.

Since light & void must be considered as unity,
infinity pops up.

But that is infinite cosmological void,
not infinite mass.

Predicted infinite mass measurement
would be realized upon impact,
but a neutrino approaching the speed of light
is not approaching infinite mass.

Nope.

Final solutions for mass objects
reaching the speed of light
should have no mass represented,
everything being on the energy side of the equation.

Mass cannot go the speed of light.

Nope.

Ism # 202 Higgs Boson

BINARY BABA OM examines

Light is not a traveling photon particle.

Traveling light is a wave function.

Light shows itself as a photon particle only when impacting with mass.

As a wave function, light is like an ocean wave passing through water.

The water is not actually traveling across the ocean,
only the energy is—not mass.

Since $E = Mc^2$, energy does have mass equivalence,
it is just not represented at all on the mass side of the equation.

Same with light.

The dance of the superstring surrounding cosmological void
provides the quanta of space for light to travel through.

Traveling light creates pressure on the space quanta.

It is the light pressure on space that is traveling as energy.

No photon particle is traveling. The imagined traveling photon
is like the circles of water which ocean energy waves stimulate
which keeps them moving without the water having to travel much.

Cycling light quanta

made up of the dance of the superstring surrounding void

seems to be the Higgs bosons

that some scientists agree make up all of space.

Note: Here “Higgs Boson” is one dancing string with two ends, called orbitrons. Each half of the string pivots around the middle node; the middle plus the two orbitrons making three nodes. The two ends dance within the same sphere, each doing five circles per cycle before repeating. This 2 x 5 dance of the superstring “Calabi-Yau” configuration is held together by the cosmological zero void. Still a net-0 spin, these 2 x 5 Higgs Bosons make up the field which we call space.

Ism # 203 dreams

Binary Baba Om tinkers

We dream residing in theta brainwaves,
experiencing possibilities more intensely than probabilities.

Theta mind frequencies are found in one octave
of {4,5,6,7,8} cycles per second.

This slower wave grouping does not allow much differentiation.

When dreaming, if the self seeks more details,
the brain will increase activity & frequency,
shortening wavelengths, allowing more differentiation.

This tends to wake the sleeper.

Memories of dreams fade as we become conscious
of more details.

Remembering the lesser detailed dream experience,
though seemingly complex due to rapid changes, can evade us.

Often, mind activity that occurred within theta waves
remain encoded within theta waves, until remembered.

When awake, we sometimes bury difficult memories
in theta waves, accessible only by theta waves.

Suppressed memories can come out in our dreams.

If we can relax enough while awake
to lower consciousness down into alpha waves,

{8,9,10,11,12} cycles per second,
then while awake we gain easier access
of any hidden memories.

A hypnotist can assist in lowering
a patient's mind into alpha.

Ism # 204 Dark NRG

Binary Baba Om dances

We postulate dark matter
because locally we witness too much spacetime contraction.

We postulate dark energy
because we witness too much spacetime expansion.

Recent unexpected observations of distant supernova explosions show that
expansions of spacetime regions farther away are not accelerating
as much as regions closer to Earth.

The source of this expanding force is claimed to be unknown
& is commonly referred to as dark energy.

Fermion particles, being quarks, electrons & neutrinos,
are constantly contracting spacetime around them while emitting bosons.
Bosons, for instance gravitons & photons, can be considered as wave fronts.

All bosons, from old as well as new stellar systems,
saturate our local spacetime,
while the older, more distance regions of spacetime
have not yet received as much of the newer-created bosons.

What we see out there is ancient history.

It is possible that we witness local spacetime expand more rapidly
due to it being more saturated with both older & newly created
space-expanding bosons than are the older areas farther away.

If this is the case, light & other bosonic energy
should be able to resolve the “dark energy” conundrum.

The answer to this dark mystery might be light.

Note: Huygens' Principle tells that every point of a wave front is the source of secondary spherical wavelets. As these bosonic wave fronts expand outward from their fermion sources, according to the inverse square law, quantum field theory suggests they destabilize the contained vacuums within surrounding spacetime, which causes those vacuums to decay into new vacuums, thus creating more space, adhering to Huygens' Principle. Spin 2 vector bosons, being gravitons, can be envisioned as closed superstring loops containing empty spacetime, which decay and create new vacuums. These decays are witnessed as the expansion of spacetime, and that decay is entropy based on harmonic degeneration from a fundamental tone into overtones. Combining the contractions of spacetime caused by fermions and the expansion caused by bosons, we witness this warping of space as gravity.

Ism # 205 ignorance

BINARY BABA OM whispers

Some people respond to my theoretical solutions
to age old science & math problems with:

If it is so easy to understand this stuff,
then why hasn't anybody else known?

My answer: The Conspiracy of Ignorance.

Conscious evolution has required time.

Time is the essence of any evolution.

Even a sudden change requires a before & an after.

Too much conscious evolution too fast can be harmful,
so people must ignore many new insights in order to survive.

Our human story has required time to accumulate history...

that was our destiny.

The Conspiracy of Ignorance is based on the time factor.

If my theory is legitimate,

its reception has a very specific timing that I am not aware of.

Humanity's accepting & overcoming of our ignorance
has been, and will be, our conscious evolution.

Today's destiny is tomorrow's history

—same thing, depending on where, rather when, we stand.

The conspiracy of ignorance's chief mechanism
is our easy distraction.

Whose conspiracy is this?

God's!

& since every part contains the whole,

God is in everyone & everything.

God is the life force.

Con + spire = breathe together.

ism # 206 Sarcastic

BINARY BABA OM manages

I may get sarcastic in a situation where it is obvious to me
that the ego of another human
is boasting unwarranted wisdom.

I realize my sarcasm & am repulsed by myself.

This either allows me to feel more compassion for the person boasting
or facilitates my decision to excuse myself to get away.

Evolution demands that we must adapt
& we do so effectively by assimilating or eliminating
each difficult situation as it arises.

ism # 207 big poof

BINARY BABA OM begins

We are supposed to believe the universe began
with no time and no space, then exploded so fast to so large
that creation began in an instant. But wait. Who was there with a clock
to say what was fast or slow? The clock we use now has no bearing
on what the essence of time was in the beginning.

To explode is a definition referring to rapid expansion.
But we impose our clock and measuring stick on a time and place
that had no perspective of our pea-brain metaphors.
For this reason I prefer to refer to the same big bang phenomena
as the big poof. Hari OM

ism # 208 water

BINARY BABA OM flows

Pure water H₂O is not an electrical conductor.

Pure water has molecular integrity,
meaning it does not easily gain or lose electrons to become ionic.

Ions allow the electron dance called conduction of electricity.
Water impurities containing strong electrolytes dissolved in water
which ionize, making water a good best conductor of electric current.

Non-electrolytes like sugar dissolve in water

& maintain their molecular integrity—

they do not break into ions

& thus do not conduct electricity,

though other impurities in the water might.

Water provides the ambience for impurities with freed-up electrons
to float & jiggle, allowing the flow of electricity.

Water is a quantum of unified field allowing guest players.

Water is unified like space being made up of superstring dances
containing the universal vacuum.

These void-dance units seem to be the Higgs Bosons
that scientists search for.

A void-dance space also will not conduct electricity
until saturated with enough impurities to allow charges to flow.

Moral? Stay pure to avoid the buzz.

Choose integrity or choose your impurities.

Saturate with impurities to be electrified.

ism # 209 rewards

BINARY BABA OM grants

People's actions are guided by society's awaiting rewards.
Seeking one of these rewards that is invisible to others
or that is so big that others say, 'No way' ... seeking this holy grail,
finding it, studying it, sharing & announcing it...
this is the path of the true explorer
who takes time & must delay gratifications
& await discoveries in order to formulate vocabulary & maps correctly.
Then others can follow.
When other people do not acknowledge any potential rewards
set aside by the explorer for the time being,
in order to research and develop an idea,
even the best explorers get criticized by the narrow minded.

ism # 210 Grow

BINARY BABA OM spouts

Once we grow full, we must grow empty.
When we learn enough
then we must clean out the mind
& make it blank.
Then again, we return to duality
& re-member unity.

ism # 211 biosphere

BINARY BABA OM around

As far as entropy goes,
it takes a whole universe falling apart
just to raise a single evolving biosphere.
Give cheer, oh tiny Earthlings.

ism # 212 Christ

BINARY BABA OM prays

The sound of a circle is caused
by an outside resistance to the circle's constancy—
like rubbing a stick against a singing bowl
or a finger against a crystal glass.
The root word of "Christ" means "to rub".
Rubbing is the cause of resistance.
Christ Shiva Maitreya Messiah
is to be a man resisting what he considers wrong.
Christ rubs people the wrong way or the right way.
When Christ rubs a circle,
Christ accentuates the name of God: Om, Amen, Allah, YHWH.
Singing, Christ becomes the word manifest,
creating a harmonic convergence
within Earth's societies.

ism # 213 Milk

BINARY BABA OM slurps

Personal experience has shown many people being strongly offensive in communicating that milk is bad after any baby finishes nursing.

These people cannot tolerate milk in their own bodies & they then make it their crusade to tell others that milk is bad for everybody.

About 80% of European descendants drink milk into old age.

Evolution of a gene allowing milk tolerance dominated in Europe after 9,000 years ago, as people began to raise milk cattle.

Within a rapid few thousand years, evolutionarily speaking, milk tolerance spread to many places among

Great Britain, Scandinavia, the Mediterranean, & India, stopped by the Himalayas. Independent mutations for lactose tolerance occurred in Africa & the Middle East, though not in the Far East, North & South America, nor Australia.

At certain times & places, in situations in which people needed milk to survive, milk intolerant people died off rapidly, before they could reproduce.

This is referred to as a “high selection differential” that allows rapid dominance of a new genetic mutation due to so many deaths occurring to people that had not inherited the milk tolerance gene.

Planet-wide today, about two-thirds of human adults cannot tolerate milk.

Since fermenting milk into yogurt consumes the sugar lactose, many lactose-intolerant people can, without difficulty, still eat yogurt & hard cheeses.

Understanding genetic history

& following the ‘make ideas available but do not impose’ philosophy, anti-milk crusaders imposing on milk drinkers seem to be doing wrong.

Note: Percentage of population samples that are milk intolerant: Dutch 1%, British 5–15%, European Americans 12%, Indians of India 20%, North American Hispanics 53%, Rural Mexicans 73.8%, Central Asians 80%, Thais 98%, Native Americans 100%.

Ism # 214 Mutation

Binary Baba Om envisions

Disharmony or too much harmony
causes mutations within a host.

The mutation then grows
in harmony with itself,
not with the host.

This may be cancer.

But if the mutation harmonizes with the host
this may be a beneficial mutation leading to the next step of evolution
when the beneficial mutation reproduces: Boom!

ism # 215 egg

BINARY BABA OM eggs-planes

The scientific answer to the question of:

“What came first, the chicken or the egg?” is: the egg.

In evolution, the chicken evolved from earlier ground-nesting birds that laid eggs.

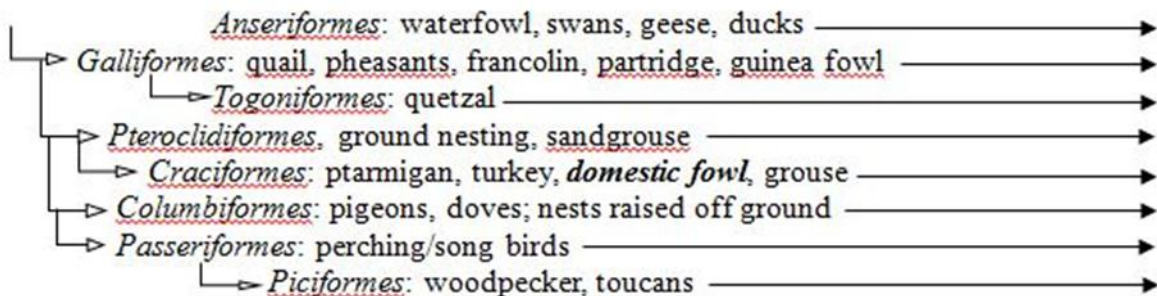

One of the pre-chicken mothers laid an egg that contained
the mutated DNA for the first chicken.

The pre-chicken mutation had already occurred
the newly evolved chicken egg, before the first chicken was born.

The first chicken looked at his cosmic clock inside his shell,
then that baby-clucker cracked the first chicken egg & marched out.

The egg came before the chicken.

Note:

ism # 216 easy

BINARY BABA OM take time

It is easy to explain away what we do not understand.

We can just make it up. Or someone else does
& we copy them. Or we could take time
to understand & then explain it
based on experience.

Hey that's a good one because then we tell
our truth, not just some memorized confusion.

Ism # 217 teacher

BINARY BABA OM teaches

Every part contains the whole.

When one part, a human, cannot find the whole within his or her self,
they might seek a teacher, guru, or cult leader.

The teacher, like every part of the whole,
attempts to express wholeness from the reduced self;
a contradiction, if not properly aligned.

This engenders a signal to noise ratio.

Thus the student not only gets access to the teacher's
connection with the whole, the God signal,
but also might absorb any noise that the teacher is expressing.

To keep a high signal to noise ratio, an individual
must regularly clean body & mind of accumulating noise.

Until the student accepts the whole God within their own self
as the purest guide, the student continues seeking an outer guide.

This means a good teacher/guide/guru has a great responsibility
to manifest enough self-control to lead the student
to their own inner guide.

Ism # 218 peace brain

BINARY BABA OM blossoms

Maybe, have an experience of unity.

Suddenly, reducing, you may acknowledge
so many trains of thought.

The trains follow different tracks

& each may seem inviting for a variety of individuals.

Different trains of thought follow pre-packaged religions,
philosophies, lifestyles, clothes, cults, books...

After the experience of unity, most people want to quickly
categorize it, forget it, or make money & power from it.

Other people may just say “wow” & take all the time they need
to find a way to explain the experience to themselves & others.

After an experience of unity,

since the whole is in every part,

anything can become someone’s new reference, stable or not.

Trains of thought.

Brains of thought.

Peace brain train.

Binary seating:

Either you are riding the peace brain
or not.

Note: Fade into harmoniously converted song modified from Cat Steven’s *Peace Train*:
“Oh Peace Brain take this planet, come take us OM again”

BINARY BABA OM PONDERERS.... ISMS

ism: a distinctive doctrine or cause
-ism: an action, practice, or process
(American Heritage Dictionary)

This book was an unexpected project.
One day it began without a plan. Just inspiration.
It flowed that way the whole time.

This project proceeded in 2013 on two different islands:
Omkareshwar, India & San Juan Island, Washington USA.
Preponderances include thoughts on relations & lifestyle,
on science, art, & religion...
on nothing & everything.
